When you installing AGP card, please make sure the following notice is fully understood and practiced. If your AGP card has "AGP 4X/8X (1.5V) notch"(show below), please make sure your AGP card is AGP 4X/8X (1.5V).

![AGP Notch Diagram]

Caution: AGP 2X card is not supported by Intel® 845(GE/PE) / 845(E/G) / 850(E) / E7205 / 865(G/PE/P) / 875P. You might experience system unable to boot up normally. Please insert an AGP 4X/8X card.

Example 1: Diamond Vipper V770 golden finger is compatible with 2X/4X mode AGP slot. It can be switched between AGP 2X(3.3V) or 4X(1.5V) mode by adjusting the jumper. The factory default for this card is 2X(3.3V). The GA-8IPE1000 Series (or any AGP 4X/8X only) motherboards might not function properly, if you install this card without switching the jumper to 4X(1.5V) mode in it.

Example 2: Some ATi Rage 128 Pro graphics cards made by "Power Color", the graphics card manufacturer & some SiS 305 cards, their golden finger is compatible with 2X(3.3V)/4X(1.5V) mode AGP slot, but they support 2X (3.3V) only. The GA-8IPE1000 Series (or any AGP 4X/8X only) motherboards might not function properly, if you install this card in it.

Note : Although Gigabyte's AG32S(G) graphics card is based on ATi Rage 128 Pro chip, the design of AG32S(G) is compliance with AGP 4X(1.5V) specification. Therefore, AG32S(G) will work fine with Intel® 845(GE/PE) / 845(E/G) / 850(E) / E7205 / 865(G/PE/P) / 875P based motherboards.

Before you install PCI cards, please remove the Dual BIOS label from PCI slots if there is one.

Please do not remove any labels on motherboard, this may void the warranty of this motherboard.

Due to rapid change in technology, some of the specifications might be out of date before publication of this booklet.

WARNING: Never run the processor without the heatsink properly and firmly attached. PERMANENT DAMAGE WILL RESULT!

Mise en garde : Ne faites jamais tourner le processeur sans que le dissipateur de chaleur soit fix correctement et fermement. UN DOMMAGE PERMANENT EN RÉSULTERA!

Achtung: Der Prozessor darf nur in Betrieb genommen werden, wenn der Wärmeableiter ordnungsgemäß und fest angebracht ist. DIES HAT EINEN PERMANENTEN SCHADEN ZUR FOLGE!

Advertencia: Nunca haga funcionar el procesador sin el dissipador de calor instalado correcta y firmemente. ¡SE PRODUCIRÁ UN DAÑO PERMANENTE!

Aviso: Nunca execute o processador sem o dissipador de calor estar adequado e firmemente conectado. O RESULTADO SERÁ UM DANO PERMANENTE!

Warning

Computer motherboards and expansion cards contain very delicate Integrated Circuit (IC) chips. To protect them against damage from static electricity, you should follow some precautions whenever you work on your computer.

1. Unplug your computer when working on the inside.
2. Use a grounded wrist strap before handling computer components. If you do not have one, touch both of your hands to a safely grounded object or to a metal object such as the power supply case.
3. Hold components by the edges and try not to touch the IC chips, leads or connectors, or other components.
4. Place components on a grounded antistatic pad or on the bag that came with the components whenever the components are separated from the system.
5. Ensure that the ATX power supply is switched off before you plug in or remove the ATX power connector on the motherboard.

Installing the motherboard to the chassis...

If the motherboard has mounting holes, but they don’t line up with the holes on the base and there are no slots to attach the spacers, do not become alarmed you can still attach the spacers to the mounting holes. Just cut the bottom portion of the spacers (the spacer may be a little hard to cut off, so be careful of your hands). In this way you can still attach the motherboard to the base without worrying about short circuits. Sometimes you may need to use the plastic springs to isolate the screw from the motherboard PCB surface, because the circuit wire may be near by the hole. Be careful, don’t let the screw contact any printed circuit wire or parts on the PCB that are near the fixing hole, otherwise it may damage the board or cause board malfunctioning.

**HT functionality requirement content:**

Enabling the functionality of Hyper-Threading Technology for your computer system requires all of the following platform components:

- **CPU:** An Intel® Pentium 4 Processor with HT Technology
- **Chipset:** An Intel® Chipset that supports HT Technology
- **BIOS:** A BIOS that supports HT Technology and has it enabled
- **OS:** An operation system that has optimizations for HT Technology

Please set the CPU host frequency in accordance with your processor’s specifications.

We don’t recommend you to set the system bus frequency over the CPU’s specification because these specific bus frequencies are not the standard specifications for CPU, chipset and most of the peripherals. Whether your system can run under these specific bus frequencies properly will depend on your hardware configurations, including CPU, Chipsets, Memory, Cards…etc.

Hardware Installation Process

English
To set up your computer, you must complete the following steps:

1. Install the Central Processing Unit (CPU)
2. Install memory modules
3. Install expansion cards
4. Connect ribbon cables, cabinet wires, and power supply

Congratulations you have accomplished the hardware installation!

Turn on the power supply or connect the power cable to the power outlet. Continue with the BIOS/software installation.

Note: If the NorthBridge on the motherboard has a fan sink, then the motherboard contains a NB_FAN connector.
Step 1: Install the Central Processing Unit (CPU)

Before installing the processor, adhere to the following warning:

If you do not match the CPU socket Pin 1 and CPU cut edge well, it will cause improper installation. Please change the insert orientation. Please make sure the CPU type is supported by the motherboard.

Step 1-1: CPU Installation

1. Angling the rod to 65-degree maybe feel a kind of tight, and then continue pull the rod to 90-degree when a noise "cough" made.

2. Pull the rod to the 90-degree directly.

3. CPU Top View

4. Locate Pin 1 in the socket and look for a (golden) cut edge on the CPU upper corner. Then insert the CPU into the socket.
Before installing the CPU Cooling Fan, adhere to the following warning:

1. Please use Intel approved cooling fan.
2. We recommend you to apply the thermal tape to provide better heat conduction between your CPU and cooling fan.
   (The CPU cooling fan might stick to the CPU due to the hardening of the thermal paste. During this condition if you try to remove the cooling fan, you might pull the processor out of the CPU socket alone with the cooling fan, and might damage the processor. To avoid this from happening, we suggest you to either use thermal tape instead of thermal paste, or remove the cooling fan with extreme caution.)
3. Make sure the CPU fan power cable is plugged in to the CPU fan connector, this completes the installation.
   Please refer to CPU cooling fan user's manual for more detail installation procedure.

1. Fasten the cooling fan supporting-base onto the CPU socket on the mainboard.
2. Make sure the CPU fan is plugged to the CPU fan connector, than install complete.
Step 2: Install memory modules

Before installing the processor and heatsink, adhere to the following warning:
Please note that the DIMM module can only fit in one direction due to the notch. Wrong orientation will cause improper installation. Please change the insert orientation.

The motherboard has 4 dual inline memory module (DIMM) sockets. The BIOS will automatically detect memory type and size. To install the memory module, just push it vertically into the DIMM socket. The DIMM module can only fit in one direction due to the notch. Memory size can vary between sockets.

GA-8IPE1000 Series supports the Dual Channel Technology. After operating the Dual Channel Technology, the bandwidth of Memory Bus will add double up to 6.4GB/s.

GA-8IPE1000 Series includes 4 DIMM sockets, and each Channel has two DIMM sockets as following:
- Channel A: DIMM 1, DIMM 2
- Channel B: DIMM 3, DIMM 4

If you want to operate the Dual Channel Technology, please note the following explanations due to the limitation of Intel® chipset specifications.
1. Only one DDR memory module is installed: The Dual Channel Technology can't operate when only one DDR memory module is installed.
2. Two DDR memory modules are installed (the same memory size and type): The Dual Channel Technology will operate when two memory modules are inserted individually into Channel A and B. If you install two memory modules in the same channel, the Dual Channel Technology will not operate.

3. Three DDR memory modules are installed: Please note that the Dual Channel Technology will not operate when three DDR memory modules are installed; part of them will not be detected.

4. Four DDR memory modules are installed: If you install four memory modules at the same time, the Dual Channel Technology will operate only when those modules have the same memory size and type.

We’ll strongly recommend our user to slot two DDR memory modules into the DIMMs with the same color in order for Dual Channel Technology to work.

The following tables include all memory-installed combination types:
(Please note that those types not in the tables will not boot up.)

1. The DIMM slot has a notch, so the DIMM memory module can only fit in one direction.

2. Insert the DIMM memory module vertically into the DIMM slot. Then push it down.

3. Close the plastic clip at both edges of the DIMM slots to lock the DIMM module. Reverse the installation steps when you wish to remove the DIMM module.

**DDR Introduction**

Established on the existing SDRAM infrastructure, DDR (Double Data Rate) memory is a high performance and cost-effective solution that allows easy adoption for memory vendors, OEMs, and system integrators.

DDR memory is a great evolutionary solution for the PC industry that builds on the existing SDRAM architecture, yet make the awesome advances in solving the system performance bottleneck by doubling the memory bandwidth. Nowadays, with the highest bandwidth of 3.2GB/s of DDR400 memory and complete line of DDR400/333/266/200 memory solutions, DDR memory is the best choice for building high performance and low latency DRAM subsystem that are suitable for servers, workstations, and full range of desktop PCs.
Step 3: Install expansion cards

1. Read the related expansion card’s instruction document before installing the expansion card into the computer.
2. Remove your computer’s chassis cover, necessary screws and slot bracket from the computer.
3. Press the expansion card firmly into the expansion slot in the motherboard.
4. Be sure the metal contacts on the card are indeed seated in the slot.
5. Replace the screw to secure the slot bracket of the expansion card.
6. Replace your computer’s chassis cover.
7. Power on the computer, if necessary, setup BIOS utility of expansion card from BIOS.
8. Install related driver from the operating system.

AGP Card

Please carefully pull out the small white-drawable bar at the end of the AGP slot when you try to install/uninstall the AGP card. Please align the AGP card to the onboard AGP slot and press firmly down on the slot. Make sure your AGP card is locked by the small white-drawable bar.
Step 4: Connect ribbon cables, cabinet wires, and power supply

1. **PS/2 Keyboard and PS/2 Mouse Connector**
   - PS/2 Mouse Connector (6 pin Female)
   - PS/2 Keyboard Connector (6 pin Female)
   - This connector supports standard PS/2 keyboard and PS/2 mouse.

2. **USB/LAN Connector**
   - Before you connect your device(s) into USB connector(s), please make sure your device(s) such as USB keyboard, mouse, scanner, zip, speaker...etc. Have a standard USB interface. Also make sure your OS supports USB controller.
   - If your OS does not support USB controller, please contact OS vendor for possible patch or driver upgrade. For more information please contact your OS or device(s) vendors.
   - LAN connector is fast Ethernet with 10/100/1000 Mbps speed.

After install onboard audio driver, you may connect speaker to Line Out jack, microphone to MIC In jack. Devices like CD-ROM, walkman etc. can be connected to Line-In jack.

Please note:
You are able to use 2-/4-/6-/8-channel audio feature by S/W selection.
If you want to enable 8-channel function you can refer to page 27, and contact your nearest dealer for optional SUR_CEN cable.

If you want the detail information for 2-/ 4-/ 6-/ 8-channel audio setup installation, please refer to page 87.

7) **IDE1/ IDE2(IDE1/IDE2 Connector)**

Please connect first hard disk to IDE1 and connect CDROM to IDE2. The red stripe of the ribbon cable must be the same side with the Pin1.

8) **FDD (Floppy Connector)**

Please connect the floppy drive ribbon cables to FDD. It supports 360K, 720K, 1.2M, 1.44M and 2.88M bytes floppy disk types. The red stripe of the ribbon cable must be the same side with the Pin1.
9) **PWR_LED**

PWR_LED is connect with the system power indicator to indicate whether the system is on/off. It will blink when the system enters suspend mode. If you use dual color LED, power LED will turn to another color.

- **CAUTION**
  - Danger of explosion if battery is incorrectly replaced.
  - Replace only with the same or equivalent type recommended by the manufacturer.
  - Dispose of used batteries according to the manufacturer's instructions.

If you want to erase CMOS...
1. Turn OFF the computer and unplug the power cord.
2. Remove the battery, wait for 30 seconds.
3. Re-install the battery.
4. Plug the power cord and turn ON the computer.
11) **F_PANEL (2x10 pins connector)**

Please connect the power LED, PC speaker, reset switch and power switch etc of your chassis front panel to the F_PANEL connector according to the pin assignment below.

12) **F_AUDIO (F_AUDIO Connector)**
If you want to use Front Audio connector, you must remove 5-6, 9-10 Jumper. In order to utilize the front audio header, your chassis must have front audio connector. Also please make sure the pin assignment on the cable is the same as the pin assignment on the MB header. To find out if the chassis you are buying support front audio connector, please contact your dealer. Please note, you can have the alternative of using front audio connector or of using rear audio connector to play sound.

## Chapter 3  BIOS Setup

BIOS Setup is an overview of the BIOS Setup Program. The program that allows users to modify the basic system configuration. This type of information is stored in battery-backed CMOS RAM so that it retains the setup information when the power is turned off.

### ENTERING SETUP

Powering ON the computer and pressing <Del> immediately will allow you to enter Setup. If you require more advanced BIOS settings, please go to "Advanced BIOS" setting menu. To enter Advanced BIOS setting menu, press "Ctrl+F1" key on the BIOS screen.

The category identifies the types of hard disk from drive C to F that has been installed in the computer. There are two types: auto type, and manual type. Manual type is user-definable; Auto type which will automatically detect HDD type.

Note that the specifications of your drive must match with the drive table. The hard disk will not work properly if you enter improper information for this category.

If you select User Type, related information will be asked to enter to the following items. Enter the information directly from the keyboard and press <Enter>. Such information should be provided in the documentation form your hard disk vendor or the system manufacturer.

- CYLS. Number of cylinders
- HEADS Number of heads
- PRECOMP Write precomp
- LANDZONE Landing zone
- SECTORS Number of sectors

If a hard disk has not been installed select NONE and press <Enter>.

**Drive A / Drive B**

The category identifies the types of floppy disk drive A or drive B that has been installed in the computer.

- None No floppy drive installed
- 360K, 5.25 in. 5.25 inch PC-type standard drive; 360K by the capacity.
- 1.2M, 5.25 in. 5.25 inch AT-type high-density drive; 1.2M by the capacity (3.5 inch when 3 Mode is Enabled).
- 720K, 3.5 in. 3.5 inch double-sided drive; 720K by the capacity.
- 1.44M, 3.5 in. 3.5 inch double-sided drive; 1.44M by the capacity.
- 2.88M, 3.5 in. 3.5 inch double-sided drive; 2.88M by the capacity.
Floppy 3 Mode Support (for Japan Area)

- **Disabled**  Normal Floppy Drive. (Default value)
- **Drive A**  Drive A is 3 mode Floppy Drive.
- **Drive B**  Drive B is 3 mode Floppy Drive.
- **Both**  Drive A & B are 3 mode Floppy Drives.

**Halt on**

The category determines whether the computer will stop if an error is detected during power up.

- **NO Errors**  The system boot will not stop for any error that may be detected and you will be prompted.
- **All Errors**  Whenever the BIOS detects a non-fatal error the system will be stopped.
- **All, But Keyboard**  The system boot will not stop for a keyboard error; it will stop for all other errors. (Default value)
- **All, But Diskette**  The system boot will not stop for a disk error; it will stop for all other errors.
- **All, But Disk/Key**  The system boot will not stop for a keyboard or disk error; it will stop for all other errors.

**Memory**

The category is display-only which is determined by POST (Power-On Self Test) of the BIOS.

**Base Memory**

The POST of the BIOS will determine the amount of base (or conventional) memory installed in the system.

The value of the base memory is typically 512 K for systems with 512 K memory installed on the motherboard, or 640 K for systems with 640 K or more memory installed on the motherboard.

**Extended Memory**

The BIOS determines how much extended memory is present during the POST. This is the amount of memory located above 1 MB in the CPU's memory address map.

( *) For GA-8IPE1000 Pro-G only.
(♦) For GA-8IPE1000-G only.
- On-Chip Primary PCI IDE
  - Enabled: Enable onboard 1st channel IDE port. (Default value)
  - Disabled: Disable onboard 1st channel IDE port.

- On-Chip Secondary PCI IDE
  - Enabled: Enable onboard 2nd channel IDE port. (Default value)
  - Disabled: Disable onboard 2nd channel IDE port.

- On-chip SATA
  - Disabled: Disable SATA controller.
  - Auto: When no device is plugged in IDE1 or IDE2, SATA controller will remap to IDE controller. (Default Value)

- SATA Port0 Configure as
  - IDE Pri. Master: Remap SATA Port 0 to IDE Pri. Master.
  - IDE Pri. Slave: Remap SATA Port 0 to IDE Pri. Slave.
  - IDE Sec. Master: Remap SATA Port 0 to IDE Sec. Master.
  - IDE Sec. Slave: Remap SATA Port 0 to IDE Sec. Slave.
  - SATA Port0: SATA controller set to SATA port0. As this mode, it support by WinXP or later OS only. (Default value)
  - SATA Port1: SATA controller set to SATA port1. As this mode, it support by WinXP or later OS only.

- SATA Port1 Configure as
  - The values depend on SATA Port0.

- USB Controller
  - Enabled: Enable USB Controller. (Default value)
  - Disabled: Disable USB Controller.
- USB 2.0 Controller
  Disable this function if you are not using onboard USB 2.0 feature.
  → Enabled  Enable USB 2.0 Controller. (Default value)
  → Disabled  Disable USB 2.0 Controller.

- USB Keyboard Support
  → Enabled  Enable USB Keyboard Support.
  → Disabled  Disable USB Keyboard Support. (Default value)

- USB Mouse Support
  → Enabled  Enable USB Mouse Support.
  → Disabled  Disable USB Mouse Support. (Default value)

- AC97 Audio
  → Auto  Enable onboard AC'97 audio function. (Default Value)
  → Disabled  Disable this function.

- Onboard H/W 1394 (*)
  → Enabled  Enable onboard IEEE 1394 function. (Default value)
  → Disabled  Disable this function.

- Onboard H/W LAN (**)?
  → Enabled  Enable Onboard H/W LAN function. (Default value)
  → Disabled  Disable this function.

- Onboard Serial Port 1
  → Auto  BIOS will automatically setup the port 1 address.
  → 3F8/IRQ4  Enable onboard Serial port 1 and address is 3F8. (Default value)
  → 2F8/IRQ3  Enable onboard Serial port 1 and address is 2F8.
  → 3E8/IRQ4  Enable onboard Serial port 1 and address is 3E8.

(*) For GA-8IPE1000 Pro-G only.
(**) For GA-8IPE1000-G only.
Onboard Serial Port 1

- **2E8/IRQ3**: Enable onboard Serial port 1 and address is 2E8.
- **Disabled**: Disable onboard Serial port 1.

Onboard Serial Port 2

- **Auto**: BIOS will automatically setup the port 2 address.
- **3F8/IRQ4**: Enable onboard Serial port 2 and address is 3F8.
- **2F8/IRQ3**: Enable onboard Serial port 2 and address is 2F8. (Default value)
- **3E8/IRQ4**: Enable onboard Serial port 2 and address is 3E8.
- **2E8/IRQ3**: Enable onboard Serial port 2 and address is 2E8.
- **Disabled**: Disable onboard Serial port 2.

UART Mode Select

(This item allows you to determine which Infra Red(IR) function of Onboard I/O chip)

- **ASKIR**: Set onboard I/O chip UART to ASKIR Mode.
- **IrDA**: Set onboard I/O chip UART to IrDA Mode.
- **Normal**: Set onboard I/O chip UART to Normal Mode. (Default Value)

UR2 Duplex Mode

- **Half**: IR Function Duplex Half. (Default Value)
- **Full**: IR Function Duplex Full.

Onboard Parallel port

- **378/IRQ7**: Enable onboard LPT port and address is 378/IRQ7. (Default Value)
- **278/IRQ5**: Enable onboard LPT port and address is 278/IRQ5.
- **Disabled**: Disable onboard LPT port.
- **3BC/IRQ7**: Enable onboard LPT port and address is 3BC/IRQ7.

Parallel Port Mode

- **SPP**: Using Parallel port as Standard Parallel Port. (Default Value)
- **EPP**: Using Parallel port as Enhanced Parallel Port.
- **ECP**: Using Parallel port as Extended Capabilities Port.
- **ECP+EPP**: Using Parallel port as ECP & EPP mode.
- **ECP Mode Use DMA**
  - ➪ 3 Set ECP Mode Use DMA to 3. (Default Value)
  - ➪ 1 Set ECP Mode Use DMA to 1.

- **Game Port Address**
  - ➪ 201 Set Game Port Address to 201. (Default Value)
  - ➪ 209 Set Game Port Address to 209.
  - ➪ Disabled Disable this function.

- **Midi Port Address**
  - ➪ 300 Set Midi Port Address to 300.
  - ➪ 330 Set Midi Port Address to 330.(Default Value)

### ACPI Suspend Type

- **S1(POS)**: Set ACPI suspend type to S1. (Default Value)
- **S3(STR)**: Set ACPI suspend type to S3.

### Power LED in S1 state

- **Blinking**: In standby mode(S1), power LED will blink. (Default Value)
- **Dual/OFF**: In standby mode(S1):
  a. If use single color LED, power LED will turn off.
  b. If use dual color LED, power LED will turn to another color.

### Off by Power button

- **Instant-off**: Press power button then Power off instantly. (Default value)
- **Delay 4 Sec.**: Press power button 4 sec to Power off. Enter suspend if button is pressed less than 4 sec.

**ModemRingOn/WakeOnLAN**
- **Disabled**  
  Disable Modem Ring on/wake on Lan function.
- **Enabled**  
  Enable Modem Ring on/wake on Lan. (Default Value)

**Resume by Alarm**
You can set "Resume by Alarm" item to enabled and key in Date/time to power on system.
- **Disabled**  
  Disable this function. (Default Value)
- **Enabled**  
  Enable alarm function to POWER ON system.

  Disable this function. (Default value)
- **Double Click**  
  Double click on PS/2 mouse left button to power on system.

**Power On By Keyboard**
- **Password**  
  Enter from 1 to 5 characters to set the Keyboard Power On Password.
- **Disabled**  
  Disable this function. (Default value)
- **Keyboard 98**  
  If your keyboard have "POWER Key" button, you can press the key to power on your system.

**KB Power ON Password**
- **Enter**  
  Input password (from 1 to 5 characters) and press Enter to set the Keyboard Power On Password.

**AC BACK Function**
- **Memory**  
  System power on depends on the status before AC lost.
- **Soft-Off**  
  Always in Off state when AC back. (Default value)
- **Full-On**  
  Always power on the system when AC back.

CPU Clock Ratio

This option will not be shown or not be available if you are using a CPU with the locked ratio.

15X~21X It depends on CPU Clock Ratio.

This setup option will automatically assign by CPU detection.
For C-Stepping P4: 8X, 10X~24X default: 15X
For Northwood CPU: 12X~24X default: 16X
The option will display "Locked" and read only if the CPU ratio is not changeable.

(*) For GA-8IPE1000 Pro-G only.
CPU Host Clock Control

Note: If system hangs up before enter CMOS setup utility, wait for 20 sec for times out reboot. When
time out occur, system will reset and run at CPU default Host clock at next boot.

- Disabled: Disable CPU Host Clock Control. (Default value)
- Enabled: Enable CPU Host Clock Control.

CPU Host Frequency

- 100MHz ~ 355MHz: Set CPU Host Clock from 100MHz to 355MHz.

If you use FSB400 Pentium 4 processor, please set "CPU Clock" to 100MHz. If you use FSB533
Pentium 4 processor, please set "CPU Clock" to 133MHz. If you use FSB800 Pentium 4
processor, please set "CPU Clock" to 200MHz.

Incorrect using it may cause your system broken. For power End-User use only!

AGP/PCI/SRC Fixed

Serial ATA device is very sensitive to SRC clock. SRC over clock may make Serial ATA device
function can’t work properly.

- Adjust AGP/PCI/SRC clock asynchronous with CPU.

Memory Frequency For

Set Supervisor/User Password

When you select this function, the following message will appear at the center of the screen to assist you in creating a password.

Type the password, up to eight characters, and press <Enter>. You will be asked to confirm the password. Type the password again and press <Enter>. You may also press <Esc> to abort the selection and not enter a password.

To disable password, just press <Enter> when you are prompted to enter password. A message "PASSWORD DISABLED" will appear to confirm the password being disabled. Once the password is disabled, the system will boot and you can enter Setup freely.

The BIOS Setup program allows you to specify two separate passwords:

SUPERVISOR PASSWORD and a USER PASSWORD. When disabled, anyone may access all BIOS Setup program function. When enabled, the Supervisor password is required for entering the BIOS Setup program and having full configuration fields, the User password is required to access only basic items.

If you select "System" at "Password Check" in Advance BIOS Features Menu, you will be prompted for the password every time the system is rebooted or any time you try to enter Setup Menu.

If you select "Setup" at "Password Check" in Advance BIOS Features Menu, you will be prompted only when you try to enter Setup.

@ BIOS™ Introduction

Gigabyte announces @ BIOS
Windows BIOS live update utility

Have you ever updated BIOS by yourself? Or like many other people, you just know what BIOS is, but always hesitate to update it? Because you think updating newest BIOS is unnecessary and actually you don’t know how to update it.

Maybe not like others, you are very experienced in BIOS updating and spend quite a lot of time to do it. But of course you don’t like to do it too much. First, download different BIOS from website and then switch the operating system to DOS mode. Secondly, use different flash utility to update BIOS. The above process is not a interesting job. Besides, always be carefully to store the BIOS source code correctly in your disks as if you update the wrong BIOS, it will be a nightmare.

Certainly, you wonder why motherboard vendors could not just do something right to save your time and effort and save you from the lousy BIOS updating work? Here it comes! Now Gigabyte announces @BIOS—the first Windows BIOS live update utility. This is a smart BIOS update software. It could help you to download the BIOS from internet and update it. Not like the other BIOS update software, it’s a Windows utility. With the help of "@BIOS", BIOS updating is no more than a click.

Besides, no matter which mainboard you are using, if it’s a Gigabyte’s product*, @BIOS help you to maintain the BIOS. This utility could detect your correct mainboard model and help you to choose the BIOS accordingly. It then downloads the BIOS from the nearest Gigabyte ftp site automatically. There are several different choices; you could use "Internet Update" to download and update your BIOS directly. Or you may want to keep a backup for your current BIOS, just choose "Save Current BIOS" to save it first. You make a wise choice to use Gigabyte, and @BIOS update your BIOS smartly. You are now worry free from updating wrong BIOS, and capable to maintain and manage your BIOS easily. Again, Gigabyte’s innovative product erects a milestone in mainboard industries.

For such a wonderful software, how much it costs? Impossible! It’s free! Now, if you buy a Gigabyte’s motherboard, you could find this amazing software in the attached driver CD. But please remember, connected to internet at first, then you could have a internet BIOS update from your Gigabyte @BIOS.
Easy Tune™ 4 Introduction

Gigabyte announces EasyTune™ 4

Windows based Overclocking utility

EasyTune 4 carries on the heritage so as to pave the way for future generations.

Overclock” might be one of the most common issues in computer field. But have many users ever tried it? The answer is probably “no”. Because “Overclock” is thought to be very difficult and includes a lot of technical know-how, sometimes “Overclock” is even considered as special skills found only in some enthusiasts. But as to the experts in "Overclock", what's the truth? They may spend quite a lot of time and money to study, try and use many different hardware or BIOS tools to do "Overclock". And even with these technologies, they still learn that it's quite a risk because the safety and stability of an "Overclock" system is unknown. Now everything is different because of a Windows based overclocking utility "EasyTune 4" --announced by Gigabyte. This windows based utility has totally changed the gaming rule of "Overclock". This is the first windows based overclocking utility is suitable for both normal and power users. Users can choose either "Easy Mode" or "Advanced Mode" for overclocking at their convenience. For users who choose "Easy Mode", they just need to click "Auto Optimize" to have auted and immediate CPU overclocking. This software will then overdrive CPU speed automatically with the result being shown in the control panel. If users prefer "Overclock" by them, there is also another choice. Click "Advanced Mode" to enjoy "sport drive" class Overclocking user interface. "Advanced Mode", allows users to change the system bus / AGP / Memory working frequency in small increments to get ultimate system performance. It operates in coordination with Gigabyte motherboards. Besides, it is different from other traditional over-clocking methods, EasyTune 4 doesn't require users to change neither BIOS nor hardware switch/jumper setting; on the other hand, they can do "Overclock" at easy step. Therefore, this is a safer way for "Overclock" as nothing is changed on software or hardware. If user runs EasyTune 4 over system's limitation, the biggest loss is only to restart the computer again and the side effects are then well controlled. Moreover, if one well-performed system speed has been tested in EasyTune 4, user can "Save" this setting and "Load" it in next time. Obviously, Gigabyte EasyTune 4 has already turned the "Overclock" technology toward to a newer generation. This wonderful software is now free bundled in Gigabyte motherboard attached in driver CD. Users may make a test drive of "EasyTune 4" to find out more amazing features by themselves.

*Some Gigabyte products are not fully supported by EasyTune 4. Please find the products supported list in the web site.
*Any "Overclocking action" is at user’s risk, Gigabyte Technology will not be responsible for any damage or instability to your processor, motherboard, or any other components.
**Face-Wizard™ Utilities Installation (*)**

**What is Face-Wizard™?**

Face-Wizard™ is a windows based utility with user-friendly interface that allows users to change the boot-up logo with picture from Gigabyte Logo Gallery on web site or other compatible picture you have.

**How does it work?**

Face-Wizard™ allows user to select BIOS on board or file in hard drive, floppy disk, zip, MO or other storage devices and combine the compatible picture you prefer into BIOS. And not only this, Face-Wizard™ also helps users to update BIOS in windows mode.

**What’s benefit for using Face-Wizard™?**

It can personalize boot-up logo to show your unique style from others, and never again looking at the black and white bootup screen.

1. Click "Face-Wizard" item.
2. Click "Next".
3. Click "Next".
4. Click "Start" - "Programs" - "GIGABYTE UTILITY" - "Face-Wizard".
5. Click "Help".

Flash BIOS Method Introduction

Method 1: Dual BIOS (*) /Q-Flash

A. What is Dual BIOS Technology?

Dual BIOS means that there are two system BIOS (ROM) on the motherboard, one is the Main BIOS and the other is Backup BIOS. Under the normal circumstances, the system works on the Main BIOS. If the Main BIOS is corrupted or damaged, the Backup BIOS can take over while the system is powered on. This means that your PC will still be able to run stably as if nothing has happened in your BIOS.

B. How to use Dual BIOS and Q-Flash Utility?

a. After power on the computer, pressing <Del> immediately during POST (Power On Self Test) it will allow you to enter Award BIOS CMOS SETUP, then press <F8> to enter Flash utility.

c. Dual BIOS Item explanation:

**Wide Range Protection: Disable(Default), Enable**

**Status 1:**
If any failure (ex. Update ESCD failure, checksum error or reset…) occurs in the Main BIOS, just before the Operating System is loaded and after the power is on, and that the Wide Range Protection is set to "Enable", the PC will boot from Backup BIOS automatically.

**Status 2:**
If the ROM BIOS on peripherals cards(ex. SCSI Cards, LAN Cards,..) emits signals to request restart of the system after the user make any alteration on it, the boot up BIOS will not be changed to the Backup BIOS.

**Boot From : Main BIOS(Default), Backup BIOS**

**Status 1:**
The user can set to boot from main BIOS or Backup BIOS.

**Status 2:**
If one of the main BIOS or the Backup BIOS fails, this item "Boot From : Main BIOS(Default)" will become gray and will not be changed by user.
Auto Recovery : Enable(Default), Disable
When one of the Main BIOS or Backup BIOS occurs checksum failure, the working BIOS will automatically recover the BIOS of checksum failure.
(In the Power Management Setup of the BIOS Setting, if ACPI Suspend Type is set to Suspend to RAM, the Auto Recovery will be set to Enable automatically.)
(If you want to enter the BIOS setting, please press “Del” key when the boot screen appears.)

Halt On Error : Disable(Default), Enable
If the BIOS occurs a checksum error or the Main BIOS occurs a WIDE RANGE PROTECTION error and Halt On Error set to Enable, the PC will show messages on the boot screen, and the system will pause and wait for the user’s instruction.
   If Auto Recovery : Disable, it will show <or the other key to continue.>
   If Auto Recovery : Enable, it will show <or the other key to Auto Recover.>

Keep DMI Data : Enable(Default), Disable
Enable: The DMI data won’t be replaced by flashing new BIOS.(recommend)
Disable: The DMI data will be replaced by flashing new BIOS.

Copy Main ROM Data to Backup
(If you boot from Backup ROM, this item will change to Copy Backup ROM Data to Main)
Auto recovery message:
   BIOS Recovery: Main to Backup
The means that the Main BIOS works normally and could automatically recover the Backup BIOS.
   BIOS Recovery: Backup to Main
The means that the Backup BIOS works normally and could automatically recover the Main BIOS.
   (This auto recovery utility is set by system automatically and can’t be changed by user.)

I. Q: What is DualBIOS™ technology?

Answer:

DualBIOS technology is a patented technology from Giga-Byte Technology. The concept of this technology is based on the redundancy and fault tolerance theory. DualBIOS™ technology simply means there are two system BIOSes (ROM) integrated onto the motherboard. One is a main BIOS, and the other is a backup BIOS. The mainboard will operate normally with the main BIOS, however, if the main BIOS is corrupt or damaged for various reasons, the backup BIOS will be automatically used when the system powered-On. Your PC will operate as before the main BIOS was damaged, and is completely transparent to the user.

DualBIOS™ Technology FAQ

GIGABYTE Technology is pleased to introduce DualBIOS technology, a hot spare for your system BIOS. This newest "Value-added" feature, in a long series of innovations from GIGABYTE, is available on this motherboard. Future GIGABYTE motherboards will also incorporate this innovation.

What's DualBIOS™?

On GIGABYTE motherboards with DualBIOS there are physically two BIOS chips. For simplicity we'll call one your "Main BIOS" and the other we'll call your "Backup" BIOS (your "hot spare"). If your Main BIOS fails, the Backup BIOS almost automatically takes over on your next system boot. Almost automatically and with virtually zero down time! Whether the problem is a failure in flashing your BIOS or a virus or a catastrophic failure of the Main BIOS chip, the result is the same - the Backup BIOS backs you up, almost automatically.
II. Q: Why does anyone need a motherboard with DualBIOS™ technology?
Answer:
In today's systems there are more and more BIOS failures. The most common reasons are virus attacks, BIOS upgrade failures, and/or deterioration of the BIOS (ROM) chip itself.
1. New computer viruses are being found that attack and destroy the system BIOS. They may corrupt your BIOS code, causing your PC to be unstable or even not boot normally.
2. BIOS data will be corrupted if a power loss/surge occurs, or if a user resets the system, or if the power button is pressed during the process of performing a system BIOS upgrade.
3. If a user mistakenly updates their mainboard with the incorrect BIOS file, then the system may not be able to boot correctly. This may cause the PC system hang in operation or during boot.
4. A flash ROM's life cycle is limited according to electronic characteristics. The modern PC utilizes the Plug and Play BIOS, and is updated regularly. If a user changes peripherals often, there is a slight chance of damage to the flash ROM.
With Giga-Byte Technology's patented DualBIOS™ technology you can reduce the possibility of hangs during system boot-up, and/or loss BIOS data due to above reasons. This new technology will eliminate valuable system down time and costly repair bills cause by BIOS failures.

III. Q: How does DualBIOS™ technology work?
Answer:
1. DualBIOS™ technology provides a wide range of protection during the boot up procedure. It protects your BIOS during system POST, ESCD update, and even all the way to PNP detection/assignment.
2. DualBIOS™ provides automatic recovery for the BIOS. When the first BIOS used during boot up does not complete or if a BIOS checksum error occurs, boot-up is still possible. In the DualBIOS™ utility, the "Auto Recovery" option will guarantee that if either the main BIOS or backup BIOS is corrupted, the DualBIOS™ technology will use the good BIOS and correct the wrong BIOS automatically.
3. DualBIOS™ provides manual recovery for the BIOS. DualBIOS™ technology contains a built-in flash utility, which can flash your system BIOS from backup to main and/or visa versa. There is no need for an OS-dependent flash utility program.
4. DualBIOS™ contains a one-way flash utility. The built-in one-way flash utility will ensure that the corrupt BIOS is not mistaken as the good BIOS during recovery and that the correct BIOS (main vs. backup) will be flashed. This will prevent the good BIOS from being flashed.
IV. Q: Who Needs DualBIOS™ technology?
Answer:

1. Every user should have DualBIOS™ technology due to the advancement of computer viruses. Everyday, there are new BIOS-type viruses discovered that will destroy your system BIOS. Most commercial products on the market do not have solutions to guard against this type of virus intrusion. The DualBIOS™ technology will provide a state-of-the-art solution to protect your PC:

   Case I.) Vicious computer viruses may wipe out your entire system BIOS. With a conventional single system BIOS PC, the PC will not be functional until it is sent for repairs.

   Case II.) If the "Auto Recovery" option is enabled in the DualBIOS™ utility, and if a virus corrupts your system BIOS, the backup BIOS will automatically reboot the system and correct the main BIOS.

   Case III.) A user may override booting from the main system BIOS. The DualBIOS™ utility may be entered to manually change the boot sequence to boot from the backup BIOS.

2. During or after a BIOS upgrade, if DualBIOS™ detects that the main BIOS is corrupt, the backup BIOS will take over the boot-up process automatically. Moreover, it will verify the main and backup BIOS checksums when booting-up. DualBIOS™ technology examines the checksum of the main and backup BIOS while the system is powered on to guarantee your BIOS operates properly.

3. Power Users will have the advantage of having two BIOS versions on their mainboard. The benefit is being able to select either version BIOS to suit the performance system needs.

4. Flexibility for high-end desktop PCs and workstation/servers. In the DualBIOS™ utility, the option can be set, "Halt On When BIOS Defects," to be enabled to halt your system with an warning message that the main BIOS has been corrupted. Most workstation/servers require constant operation to guarantee services have not been interrupted. In this situation, the "Halt On When BIOS Defects" message may be disabled to avoid system pauses during normal booting. Another advantage you gain from Giga-Byte's DualBIOS™ technology is the ability to upgrade from dual 2 Mbit BIOS to dual 4 Mbit BIOS in the future if extra BIOS storage is need.
Q-Flash™ is a BIOS flash utility embedded in Flash ROM. With this utility, users only have to stay in the BIOS menu when they want to update BIOS. Q-Flash™ allows users to flash BIOS without any utility in DOS or Windows. Using Q-Flash™ indicating no more fooling around with any complicated instructions and operating system since it is in the BIOS menu.

Please note that because updating BIOS has potential risk, please do it with caution!! We are sorry that Gigabyte Technology Co., Ltd is not responsible for damages of system because of incorrect manipulation of updating BIOS to avoid any claims from end-users.

Before You Begin:
Before you start updating BIOS with the Q-Flash™ utility, please follow the steps below first.

1. Download the latest BIOS for your motherboard from Gigabyte’s website.
2. Extract the BIOS file downloaded and save the BIOS file (the one with model name.Fxx. For example, 7VRXP.F12) to a floppy disk.
3. Reboot your PC and press Del to enter BIOS menu.

The BIOS upgrading guides below are separated into two parts. If your motherboard has dual BIOS, please refer to Part One. If your motherboard has single BIOS, please refer to Part Two.
Part One:
Updating BIOS with Q-Flash™ Utility on Dual BIOS Motherboards.

Some of Gigabyte motherboards are equipped with dual BIOS. In the BIOS menu of the motherboards supporting Q-Flash™ and Dual BIOS, the Q-Flash™ utility and Dual BIOS utility are combined in the same screen. This section only deals with how to use Q-Flash™ utility. In the following sections, we take GA-7VRXP as the example to guide you how to flash BIOS from an older version to the latest version. For example, from F10 to F12.

The BIOS file is F10 before updating.

Entering the Q-Flash™ utility:
Step1: To use Q-Flash™ utility, you must press Del in the boot screen to enter BIOS menu.
Step 2: Press F8 button on your keyboard and then Y button to enter the Q-Flash™ utility.

Exploring the Q-Flash™/Dual BIOS utility screen

The Q-Flash™/Dual BIOS utility screen consists of the following key components.
Task menu for Dual BIOS utility:
Contains the names of eight tasks and two items showing information about the BIOS ROM type. Blocking a task and pressing Enter key on your keyboard to enable execution of the task.

Task menu for Q-Flash™ utility:
Contains the names of four tasks. Blocking a task and pressing Enter key on your keyboard to enable execution of the task.

Action bar:
Contains the names of four actions needed to operate the Q-Flash™/Dual BIOS utility. Pressing the buttons mentioned on your keyboards to perform these actions.

Using the Q-Flash™ utility:
This section tells you how to update BIOS using the Q-Flash™ utility. As described in the "Before you begin" section above, you must prepare a floppy disk having the BIOS file for your motherboard and insert it to your computer. If you have already put the floppy disk into your system and have entered the Q-Flash™ utility, please follow the steps below to flash BIOS.

Steps:
1. Press arrow buttons on your keyboard to move the light bar to "Load Main BIOS from Floppy" item in the Q-Flash™ menu and press Enter button.

   If you want to save the current BIOS for backup purpose, you can begin Step 1 with "Save Main BIOS to Floppy" item.

   ![NOTE](image)

   **Using the Q-Flash™ utility:**
   This section tells you how to update BIOS using the Q-Flash™ utility. As described in the "Before you begin" section above, you must prepare a floppy disk having the BIOS file for your motherboard and insert it to your computer. If you have already put the floppy disk into your system and have entered the Q-Flash™ utility, please follow the steps below to flash BIOS.

   **Steps:**
   1. Press arrow buttons on your keyboard to move the light bar to "Load Main BIOS from Floppy" item in the Q-Flash™ menu and press Enter button.

   ![NOTE](image)

   If you want to save the current BIOS for backup purpose, you can begin Step 1 with "Save Main BIOS to Floppy" item.
Later, you will see a box pop up showing the BIOS files you previously downloaded to the floppy disk.

2. Move to the BIOS file you want to flash and press Enter.

   In this example, we only download one BIOS file to the floppy disk so only one BIOS file, 7VRXP.F12, is listed.

   **CAUTION**

   Please confirm again you have the correct BIOS file for your motherboard.

   ![BIOS file in the floppy disk.](image)

   After pressing Enter, you’ll then see the progress of reading the BIOS file from the floppy disk.

   ![Do not turn off power or reset your system at this stage!!](image)

   Please do not take out the floppy disk when it begins flashing BIOS.
After BIOS file is read, you'll see a confirmation dialog box asking you "Are you sure to update BIOS?"

Please do not take out the floppy disk when it begins flashing BIOS.

3. Press **Y** button on your keyboard after you are sure to update BIOS. Then it will begin to update BIOS. The progress of updating BIOS will be displayed.

You can press "Enter" to continue updating BIOS or "ESC" to abort.

The progress of updating BIOS.

Do not turning off power or reset your system at this stage to avoid damaging your BIOS rom!!

Please do not take out the floppy disk when it begins flashing BIOS.
4. Press any keys to return to the Q-Flash™ menu when the BIOS updating procedure is completed.

You can repeat Step 1 to 4 to flash the backup BIOS, too.

5. Press Esc and then Y button to exit the Q-Flash™ utility. The computer will restart automatically after you exit Q-Flash™.
After system reboots, you may find the BIOS version on your boot screen becomes the one you flashed.

The BIOS file becomes F12 after updating.

The following is an AMI BIOS menu screen. However, you can also find similar option in AWARD BIOS menu.

6. Press Del to enter BIOS menu after system reboots. When you are in BIOS menu, move to Load Fail-Safe Defaults item and press Enter to load BIOS Fail-Safe Defaults. Normally the system redetects all devices after BIOS has been upgraded. Therefore, we highly recommend reloading the BIOS defaults after BIOS has been upgraded.

- Press Enter on your keyboard
Press Y on your keyboard to load defaults.

Press Y on your keyboard to save and exit.

7. Select **Save & Exit Setup** item to save the settings to CMOS and exit the BIOS menu. System will reboot after you exit the BIOS menu. The procedure is completed.
Part Two:

Updating BIOS with Q-Flash™ Utility on Single-BIOS Motherboards.

This part guides users of single-BIOS motherboards how to update BIOS using the Q-Flash™ utility.

Entering the Q-Flash™ utility:

Step 1: To use the Q-Flash™ utility, you must press Del in the boot screen to enter BIOS menu.

2. Press F8 on your keyboard and then Y button to enter the Q-Flash™ utility.
Exploring the Q-Flash™ utility screen

The Q-Flash™ BIOS utility screen consists of the following key components.

**Task menu for the Q-Flash™ utility:** Contains the names of three tasks. Blocking a task and pressing Enter key on your keyboard to enable execution of the task.

**Action bar:** Contains the names of four actions needed to operate the Q-Flash™ utility. Pressing the buttons mentioned on your keyboard to perform these actions.

**Steps:**

1. Press arrow buttons on your keyboard to move the light bar to "Load Main BIOS from Floppy" item in the Q-Flash™ menu and press Enter button.

   **NOTE:** If you want to save the current BIOS for backup purpose, you can begin Step 1 with Save Main BIOS to Floppy item.
Later, you will see a box showing the BIOS files you downloaded to the floppy disk. In this example, we only download one BIOS for this board, 8GE800.F4 so only one BIOS file is listed.

2. Highlight the BIOS file you want to flash and press Enter button on your keyboard to enable reading from the BIOS file from the floppy.

⚠️ Please confirm again you have the correct BIOS file for your motherboard.

After BIOS file is read, you’ll see a confirmation dialog box asking you "Are you sure to update BIOS?"
3. Press **Y** button if you make sure to update BIOS.

Then it will begin to update BIOS. The progress of updating will be shown at the same time.

4. Press any keys to return to the Q-Flash™ menu when the BIOS updating procedure is completed.

5. Press **Esc** and then **Enter** to exit the Q-Flash™ utility. System will restart.

6. Press **Del** to enter BIOS menu after system reboots and load BIOS Fail-Safe Defaults. See how to load BIOS Fail-Safe Defaults, please kindly refer to Step 6 to 7 in Part One.

    **Congratulation!! You have updated BIOS successfully!!**
Method 2: @ BIOS Utility
If you don't have DOS boot disk, we recommend that you used Gigabyte @BIOS™ program to flash BIOS.

Methods and steps:
I. Update BIOS through Internet
   a. Click "Internet Update" icon
   b. Click "Update New BIOS" icon
   c. Select @BIOS™ sever
   d. Select the exact model name on your motherboard
   e. System will automatically download and update the BIOS.
II. Update BIOS NOT through Internet:
   a. Do not click "Internet Update" icon
   b. Click "Update New BIOS"
   c. Please select "All Files" in dialog box while opening the old file.
   d. Please search for BIOS unzip file, downloading from internet or any other methods (such as:
      8IPE1000 Pro-G.F1).
   e. Complete update process following the instruction.

III. Save BIOS
   In the very beginning, there is "Save Current BIOS" icon shown in dialog box. It means to save the
   current BIOS version.

IV. Check out supported motherboard and Flash ROM:
   In the very beginning, there is "About this program" icon shown in dialog box. It can help you check
   out which kind of motherboard and which brand of Flash ROM are supported.

Note:
   a. In method I, if it shows two or more motherboard’s model names to be selected, please make
      sure your motherboard’s model name again. Selecting wrong model name will cause the
      system unbooted.
   b. In method II, be sure that motherboard’s model name in BIOS unzip file are the same as your
      motherboard’s. Otherwise, your system won’t boot.
   c. In method I, if the BIOS file you need cannot be found in @BIOS™ server, please go onto
      Gigabyte’s web site for downloading and updating it according to method II.
   d. Please note that any interruption during updating will cause system unbooted
The installation of windows 98SE/2K/ME/XP is very simple. Please follow next step to install the function!

**Stereo Speakers Connection and Settings:**
We recommend that you use the speaker with amplifier to acquire the best sound effect if the stereo output is applied.

**STEP 1:**
Connect the stereo speakers or earphone to "Line Out".

**STEP 2:**
Following installation of the audio driver, you find a [Sound Effect](#) icon on the lower right hand taskbar. Click the icon to select the function.

**STEP 3:**
Click "Speaker Configuration" then click on the left selection bar and select "2CH Speaker" to complete 2 channel audio configuration.
**4 Channel Analog Audio Output Mode**

**STEP 1:**
Connect the front channels to "Line Out",
the rear channels to "Line In".

**STEP 2:**
Following installation of the audio driver, you find a
icon a Sound Effect icon on the lower right hand
taskbar. Click the icon to select the function.

**STEP 3:**
Click "Speaker Configuration" and select the "UAJ Function". Then click on the left selection bar and
select "4CH Speaker" to complete 4 channel audio configuration.
6 Channel Analog Audio Output Mode

Use the back audio panel to connect the audio output without any additional module.

STEP 1:
Connect the front channels to "Line Out", the rear channels to "Line In", and the Center/Subwoofer channels to "MIC In".

STEP 2:
Following installation of the audio driver, you find a Sound Effect icon on the lower right hand taskbar. Click the icon to select the function.

STEP 3:
Click "Speaker Configuration" and select the "UAJ Function". Then click on the left selection bar and select "6CH Speaker" to complete 6 channel audio configuration.
**8 Channel Audio Setup (using Audio Combo Kit, Optional Device):**

(Audio Combo Kit offers SPDIF output, an optical and coaxial cable and a Surround-Kit. The Surround-Kit offers R/L surround, center/subwoofer output and rear surround)

**STEP 1:**
Secure the Audio Combo Kit at the panel on the back of the case.

**STEP 2:**
Connect the Surround-Kit to the SUR_CEN connector located on the motherboard.

**STEP 3:**
There are two methods of 8 channel audio configuration:

Method 1:
Connect the front channels to the "LINE OUT" port located on the audio panel and the rear channels to the Surround-Kit "REAR R/L" port. Connect the center/subwoofer channels to the Surround-Kit "SUB CENTER" and the R/L channels to the Surround-Kit "SUR BACK" port.
Method 2:
Connect the front channels to the "LINE OUT" port located on the audio panel and the rear channels to the "LINE IN" port. Connect the center/subwoofer channels to the "MIC IN" port located on the audio panel and the R/L channels to the Surround-Kit "SUR BACK" port. (This method requires UAJ function)

STEP 4:
Following installation of the audio driver, you find a Sound Effect icon on the lower right hand taskbar. Click the icon to select the function.

STEP 5:
Click "Speaker Configuration" and select both the "UAJ Function" and "Only Surround-Kit". Then click on the left selection bar and select "8CH Speaker" to complete 8 channel audio configuration.

Sound Effect Configuration:
At the sound effect menu, users can adjust sound option settings as desired.
**SPDIF Output Device (Optional Device)**

A "SPDIF output" device is available on the motherboard. Cable with rear bracket is provided and could link to the "SPDIF output" connector (As picture.) For the further linkage to decoder, rear bracket provides coaxial cable and Fiber connecting port.

1. Connect the SPDIF output device to the rear bracket of PC, and fix it with screw.

2. Connect SPDIF device to the motherboard.

3. Connect SPDIF to the SPDIF decoder.
Jack-Sensing(UAJ) Introduction

Jack-Sensing provides audio connectors error-detection function.

![CAUTION]

Install Microsoft DirectX 8.1 or later version before to enable Jack-Sensing support for Windows 98/98SE/2000/ME.

Jack-Sensing includes 2 parts: AUTO and MANUAL. Following is an example for 2 channels (Windows XP):

**Introduction of audio connectors**
You may connect CDROM, Walkman or others audio input devices to Line In jack, speakers, earphone or others output devices to Line Out jack, and microphone to MIC In jack.

**Auto-detecting:**
Please connect the devices to the right jacks as above. A window will appear as right picture if you setup the devices properly. Please note that 3D audio function will only appear when 3D audio inputs.
If you set wrong with the connectors, the warning message will come out as right picture.

Manual setting:
If the device picture shows different from what you set, please press "Manual Selection" to set.

UAJ Introduction
UAJ (Universal Audio Jack) has a very smart feature: It will switch signal automatically when user plugs his audio device to the wrong jack (Line-in/Line-out). That means users do not need to worry the audio device should be plug in Line-in or Line-out jack, the device will work perfectly after UAJ is activated.

Enable UAJ function:
You can click "UAJ Automatic" button to enable UAJ function.
Xpress Recovery Introduction

What is Xpress Recovery?

Xpress Recovery utility is an utility for backing up and restoring O.S. partition. If the hard drive can not work properly, you can restore it to the original state.

1. It supports FAT16, FAT32, NTFS format.
2. It must be connected to IDE1 Master.
3. It's only allows you to install one O.S.
4. It must be used with IDE hard disk supporting HPA.
5. The first partition must be set as the boot partition. When the boot partition is backed up, please do not change the size.
6. It is not recommend to use Xpress Recovery if you had ever used Ghost to return boot manager to NTFS format.

1. System data and hard disk's reading/writing speed will affect backing up speed.
2. We recommend that you install Xpress Recovery immediately after installing O.S., drivers and applications.

How to use the Xpress Recovery

There are two ways to enter the Xpress Recovery utility. (see the below)

1. Text Mode: press F9 during powering on the computer.

2. BMP Mode: boot from CD-ROM

   Please go to "Advanced BIOS" setting menu and set boot from CD-ROM, then save and exit the BIOS menu. Later, please insert MB driver CD into your drive when "Boot from CD:" appears at the bottom of the screen, press any key to enter Xpress Recovery.

   Boot from CD:
You can highlight the item by using the arrows keys on your keyboard and enter key to enter the menu.

Text Mode:

BMP Mode:

If you ever entered Xpress Recovery by booting from CD-ROM, you'll still be directed to BMP mode by pressing F9 in the bootup screen.
1. Execute Backup Utility:

☞ Press B to Backup your System or Esc to Exit
   The Backup utility will scan the system automatically and back up it.
   The backed up data will be saved as an hidden image.

2. Execute Restore Utility:

☞ This program will recover your system to factory default.
   Press R to recover your system.
   Press Esc to exit
   Restore the backup image to the original state.

3. Remove Backup Image:

☞ Are you sure to remove backup image? (Y/N)
   Remove the backup image.

4. Exit and Restart:

   Exit and restart your computer.
Chapter 5 Appendix

Install Drivers

Pictures below are shown in Windows XP

Insert the driver CD-title that came with your motherboard into your CD-ROM drive, the driver CD-title will auto start and show the installation guide. If not, please double click the CD-ROM device icon in "My computer", and execute the setup.exe.

INSTALL CHIPSET DRIVER

This page shows the drivers that need to be installed for the system. Click each item to install the driver manually or switch to the to install the drivers automatically.

Massage: Some device drivers will restart your system automatically. After restarting your system the "Xpress Install" will continue to install other drivers.

The "Xpress Install" uses the"Click and Go" technology to install the drivers automatically. Just select the drivers you want then click the "GO" button. The will execute the installation for you by itself.

We recommend that you install all components in the list.

Click "GO".
Item Description

- Intel Chipset Software Installation Utility
  Tell the operating system how the chipset components will be configured.

- USB Patch for WinXP
  This patch driver can help you to resolve the USB device wake up S3 hang up issue in XP.

- Marvell 10/100/1000 Base LAN Driver (♦)
  For Marvell 10/100/1000 LAN chip use.

- RealTek AC97 Codec Driver
  For Intel(R) ICH/ICH2/ICH4/ICH5 AC97 audio.

- Intel USB 2.0 Driver
  It is recommended that you use the Microsoft Windows update for the most updated driver for XP/2K.

For USB2.0 driver support under Windows XP operating system, please use Windows Service Pack. After install Windows Service Pack, it will show a question mark "?" in "Universal Serial Bus controller" under "Device Manager". Please remove the question mark and restart the system (System will auto-detect the right USB2.0 driver).

SOFTWARE APPLICATION

This page reveals the value-added software developed by Gigabyte and its worldwide partners.

- Gigabyte Windows Utilities Manager (GWUM)
  This utility can integrate the Gigabyte's applications in the system tray.

- Gigabyte Management Tool (GMT)
  A useful tool which can manage the computer via the network.

- EasyTune4
  Powerful utility that integrates the overclocking and hardware monitoring functions.

- DMI Viewer
  Windows based utility which is used to browse the DMI/SMBIOS information of the system.

- Face-Wizard
  New utility for adding BIOS logo.

- @BIOS
  Gigabyte windows flash BIOS utility.

- Acrobat e-Book
  Useful utility from Adobe.

- Acrobat Reader
  Popular utility from Adobe for reading .PDF file format documents.

- Norton Internet Security (NIS)
  Integrated utility which includes anti-virus, ad control, etc.

- DirectX 9
  Install Microsoft DirectX 9 to enable 3D hardware acceleration that support for operating system to achieve better 3D performance.

- Marvell VCT Utility
  Utility for Marvell chips. [VCT (Virtual Cable Tester) Technology for Gigabit Networks]

FAQ

Below is a collection of general asked questions. To check general asked questions based on a specific motherboard model, please log on to http://tw.giga-byte.com/faq/faq.htm

Question 1: I cannot see some options that were included in previous BIOS after updating BIOS. Why?
Answer: Some advanced options are hidden in new BIOS version. Please press Ctrl and F1 keys after entering BIOS menu and you will be able to see these options.

Questions 2: Why is the light of my keyboard/optical mouse still on after computer shuts down?  
Answer: In some boards, a small amount of electricity is kept on standby after computer shuts down and that's why the light is still on.

Question 3: Why cannot I use all functions in EasyTune™ 4?  
Answer: The availability of the listed functions in EasyTune™ 4 depends on the MB chipset. If the chipset doesn't support certain functions in EasyTune™ 4, these functions will be locked automatically and you will not be able to use them.

Question 4: Why do I fail to install RAID and ATA drivers under Win 2000 and XP on boards that support RAID function after I connect the boot HDD to IDE3 or IDE4 ?  
Answer: First of all, you need to save some files in the CD-ROM to a floppy disk before installing drivers. You also need to go through some rather different steps in the installation process. Therefore, we suggest that you refer to the installation steps in the RAID manual at our website. (Please download it at http://tw.giga-byte.com/support/user_pdf/raid_manual.pdf)
**Question 5**: How do I clear CMOS?

**Answer**: If your board has a Clear CMOS jumper, please refer to the Clear CMOS steps in the manual. If your board doesn't have such jumper, you can take off the on-board battery to leak voltage to clear CMOS. Please refer to the steps below:

**Steps:**

1. Turn off power.
2. Disconnect the power cord from MB.
3. Take out the battery gently and put it aside for about 10 minutes (Or you can use a metal object to connect the positive and negative pins in the battery holder to make them short for one minute).
4. Re-insert the battery to the battery holder.
5. Connect power cord to MB again and turn on power.
6. Press Del to enter BIOS and load Fail-Safe Defaults.
7. Save changes and reboot the system.

**Question 6**: Why does system seem unstable after updating BIOS?

**Answer**: Please remember to load Fail-Safe Defaults (Or Load BIOS Defaults) after flashing BIOS. However, if the system instability still remains, please clear CMOS to solve the problem.

**Question 7**: Why do I still get a weak sound after turning up the speaker to the maximum volume?

**Answer**: Please make sure the speaker you are using is equipped with an internal amplifier. If not, please change another speaker with power/amplifier and try again later.

**Question 8**: How do I disable onboard VGA card in order to add an external VGA card?

**Answer**: Gigabyte motherboards will auto-detect the external VGA card after it is plugged in, so you don't need to change any setting manually to disable the onboard VGA.

**Question 9**: Why cannot I use the IDE 2?

**Answer**: Please refer to the user manual and check whether you have connected any cable that is not provided with the motherboard package to the USB Over Current pin in the Front USB Panel. If the cable is your own cable, please remove it from this pin and do not connect any of your own cables to it.
Question 10: Sometimes I hear different continuous beeps from computer after system boots up. What do these beeps usually stand for?

Answer: The beep codes below may help you identify the possible computer problems. However, they are only for reference purposes. The situations might differ from case to case.

→AMI BIOS Beep Codes
*Computer gives 1 short beep when system boots successfully.
*Except for beep code 8, these codes are always fatal.

1 beep Refresh failure
2 beeps Parity error
3 beeps Base 64K memory failure
4 beeps Timer not operational
5 beeps Processor error
6 beeps 8042 - gate A20 failure
7 beeps Processor exception interrupt error
8 beeps Display memory read/write failure
9 beeps ROM checksum error
10 beeps CMOS shutdown register read/write error
11 beeps Cache memory bad

→AWARD BIOS Beep Codes
1 short: System boots successfully
2 short: CMOS setting error
1 long 1 short: DRAM or M/B error
1 long 2 short: Monitor or display card error
1 long 3 short: Keyboard error
1 long 9 short: BIOS ROM error
Continuous long beeps: DRAM error
Continuous short beeps: Power error

Question 11: How to set in the BIOS in order to bootup from SATA HDDs by either RAID or ATA mode?

Answer: Please set in the BIOS as follow:
1. Advanced BIOS features--> SATA/RAID/SCSI boot order: "SATA"
2. Advanced BIOS features--> First boot device: "SCSI"
3. Integrated Peripherals--> Onboard H/W Serial ATA: "enable"

Then it depends on the SATA mode that you need to set "RAID" to RAID mode or "BASE" to normal ATA mode in the item named Serial ATA function.
**Question 12:** For the M/B which have RAID function, how to set in the BIOS in order to bootup from IDE3, 4 by either RAID or ATA mode?

**Answer:** Please set in the BIOS as follow:

1. Advanced BIOS features-->(SATA)/RAID/SCSI boot order: "SATA"
2. Advanced BIOS features--> First boot device: "SCSI"
3. Integrated Peripherals---> Onboard H/W ATA/RAID: "enable"

Then it depends on the RAID mode that you need to set "RAID" to RAID mode or "ATA" to normal ATA mode in the item named RAID controller function.

**Question 13:** How to set in the BIOS to bootup from the IDE/ SCSI/ RAID card ?

**Answer:** Please set in the BIOS as follow:

1. Advanced BIOS features-->(SATA)/RAID/SCSI boot order: "SCSI"
2. Advanced BIOS features--> First boot device: "SCSI"

Then it depends on the mode(RAID or ATA) that you need to set in RAID/ SCSI BIOS.
If you encounter any trouble during boot up, please follow the troubleshooting procedures.

START

Turn off the power and unplug the AC power cable, then remove all of the add-on cards and cables from motherboard.

Please make sure motherboard & chassis are not short?

Yes

Please isolate the short pin.

No

Failure has been excluded.

Please make sure all jumper settings (such as CPU system bus speed, frequency ratio, voltage and etc.) are set properly.

Yes

Make sure the jumper setting are correct.

No

Failure has been excluded.

Check if the CPU cooling fan attached to CPU properly. Is CPU cooling fan power connected to CPU_FAN properly?

Yes

Plug the CPU cooling fan power in the CPU fan connector. Plug in the AC power connector.

No

Failure has been excluded.

Check if the memory install properly into the DIMM slot.

Yes

Failure has been excluded.

No

Failure has been excluded.

Insert the VGA card. Then plug in ATX power cable and turn on the system.

A
If the above procedure unable to solve your problem, please contact with your local retailer or national distributor for help. Or, you could submit your question to the service mail via Gigabyte website technical support zone (http://www.gigabyte.com.tw). The appropriate response will be provided ASAP.
