* The WEEE marking on the product indicates this product must not be disposed of with user's other household waste and must be handed over to a designated collection point for the recycling of waste electrical and electronic equipment!!
* The WEEE marking applies only in European Union's member states.
DECLARATION OF CONFORMITY

DECLARATION OF CONFORMITY

For FCC Part 2 Section 2.1074(a)

Responsible Party Name: GT, INC. (U.S.A.)

Address: 1735 Railroad Street
City of Industry, CA 91744

Phone/Fax No: (818) 844-9338 (844-934-3339

Made to the following sections:

Per FCC Parts 15, 950

a Class B Digital Device

Supplementary Information:

EC Declaration of Conformity:

EC Part 15, Support B, Section 15.706(4) and Section 15.109

Manufactured by:

Signature: John Smith
Name: John Smith

Date: Sep 20, 2005
Copyright
© 2005 GIGA-BYTE TECHNOLOGY CO., LTD. All rights reserved.
The trademarks mentioned in the manual are legally registered to their respective companies.

Notice
The written content provided with this product is the property of Gigabyte.
No part of this manual may be reproduced, copied, translated, or transmitted in any form or by any means without Gigabyte's prior written permission. Specifications and features are subject to change without prior notice.

Product Manual Classification
In order to assist in the use of this product, Gigabyte has categorized the user manual in the following:

■ For quick installation, please refer to the "Hardware Installation Guide" included with the product.

■ For detailed product information and specifications, please carefully read the "Product User Manual".

■ For detailed information related to Gigabyte's unique features, please go to "Technology Guide" section on Gigabyte's website to read or download the information you need.

For more product details, please click onto Gigabyte's website at www.gigabyte.com.tw

(Note) Because of CPU limitations, if you want to install DDR400 memory modules in your system, please install either one double-sided or two single-sided DDR400 memory modules. The DDR400 speed will drop down to DDR333 if you install two double-sided or three single-sided DDR400 memory modules.
Chapter 1 Hardware Installation

1-1 Considerations Prior to Installation

Preparing Your Computer
The motherboard contains numerous delicate electronic circuits and components which can become damaged as a result of electrostatic discharge (ESD). Thus, prior to installation, please follow the instructions below:

1. Please turn off the computer and unplug its power cord.
2. When handling the motherboard, avoid touching any metal leads or connectors.
3. It is best to wear an electrostatic discharge (ESD) cuff when handling electronic components (CPU, RAM).
4. Prior to installing the electronic components, please have these items on top of an antistatic pad or within a electrostatic shielding container.
5. Please verify that the power supply is switched off before unplugging the power supply connector from the motherboard.

Installation Notices

1. Prior to installation, please do not remove the stickers on the motherboard. These stickers are required for warranty validation.
2. Prior to the installation of the motherboard or any hardware, please first carefully read the information in the provided manual.
3. Before using the product, please verify that all cables and power connectors are connected.
4. To prevent damage to the motherboard, please do not allow screws to come in contact with the motherboard circuit or its components.
5. Please make sure there are no leftover screws or metal components placed on the motherboard or within the computer casing.
6. Please do not place the computer system on an uneven surface.
7. Turning on the computer power during the installation process can lead to damage to system components as well as physical harm to the user.
8. If you are uncertain about any installation steps or have a problem related to the use of the product, please consult a certified computer technician.

Instances of Non-Warranty

1. Damage due to natural disaster, accident or human cause.
2. Damage as a result of violating the conditions recommended in the user manual.
3. Damage due to improper installation.
4. Damage due to use of uncertified components.
5. Damage due to use exceeding the permitted parameters.
6. Product determined to be an unofficial Gigabyte product.
## 1-2 Feature Summary

<table>
<thead>
<tr>

</thead>
</table>

(Note 3) Whether the CPU fan speed control function is supported will depend on the CPU cooler you install.

(Note 4) EasyTune functions may vary depending on different motherboards.
1-3  Installation of the CPU and Heatsink

Before installing the CPU, please comply with the following conditions:
1. Please make sure that the motherboard supports the CPU.
2. Please take note of the one indented corner of the CPU. If you install the CPU in the wrong direction, the CPU will not insert properly. If this occurs, please change the insert direction of the CPU.
3. Please add an even layer of heat sink paste between the CPU and heatsink.
4. Please make sure the heatsink is installed on the CPU prior to system use, otherwise overheating and permanent damage of the CPU may occur.
5. Please set the CPU host frequency in accordance with the processor specifications. It is not recommended that the system bus frequency be set beyond hardware specifications since it does not meet the required standards for the peripherals. If you wish to set the frequency beyond the proper specifications, please do so according to your hardware specifications including the CPU, graphics card, memory, hard drive, etc.

1-3-1  Installation of the CPU

Check the processor pins to see that none are bent. Move the socket lever to the unlocked position as shown in Figure 1.(90° to the plane of the motherboard) prior to inserting the processor. The pin 1 location is designated on the processor by a copper triangle that matches up to a triangle on the socket as shown in Figure 2. Align the processor to the socket and gently lower it into place. Do not force the processor into the socket.

![Fig.1](image1)
Position lever at a 90 degree angle.

![Fig.2](image2)
Pin 1 location on the socket and processor. Gently place the CPU into position making sure that the CPU pins fit perfectly into their holes. Once the CPU is positioned into its socket, place one finger down on the middle of the CPU and gently press the metal lever back into its original position.

Please use extra care when installing the CPU. The CPU will not fit if positioned incorrectly. Rather than applying force, please change the positioning of the CPU.
1-3-2 Installation of the Heatsink

Fig. 1
Before installing the heat sink, please first add an even layer of heat sink paste on the surface of the CPU. Install all the heat sink components (Please refer to the heat sink manual for detailed installation instructions).

Fig. 2
Please connect the heat sink power connector to the CPU_FAN connector located on the motherboard so that the heat sink can properly function to prevent CPU overheating.

NOTE
The heat sink may adhere to the CPU as a result of hardening of the heat sink paste. To prevent such an occurrence, it is suggested that either thermal tape rather than heat sink paste be used for heat dissipation or using extreme care when removing the heat sink.

1-4 Installation of Memory

Before installing the memory modules, please comply with the following conditions:
1. Please make sure that the memory used is supported by the motherboard. It is recommended that memory of similar capacity, specifications and brand be used.
2. Before installing or removing memory modules, please make sure that the computer power is switched off to prevent hardware damage.
3. Memory modules have a foolproof insertion design. A memory module can be installed in only one direction. If you are unable to insert the module, please switch the direction.

The motherboard supports DDR memory modules, whereby BIOS will automatically detect memory capacity and specifications. Memory modules are designed so that they can be inserted only in one direction. The memory capacity used can differ with each slot.
Fig. 1
The DIMM socket has a notch, so the DIMM memory module can only fit in one direction. Insert the DIMM memory module vertically into the DIMM socket. Then push it down.

Fig. 2
Close the plastic clip at both edges of the DIMM sockets to lock the DIMM module. Reverse the installation steps when you wish to remove the DIMM module.

Please refer to the recommended memory configuration table below before installing memory.

Recommended Memory Configurations (SS: Single-Sided, DS: Double-Sided)

1-5 Installation of Expansion Cards

You can install your expansion card by following the steps outlined below:

1. Read the related expansion card's instruction document before install the expansion card into the computer.
2. Remove your computer's chassis cover, screws and slot bracket from the computer.
3. Press the expansion card firmly into expansion slot in motherboard.
4. Be sure the metal contacts on the card are indeed seated in the slot.
5. Replace the screw to secure the slot bracket of the expansion card.
6. Replace your computer’s chassis cover.
7. Power on the computer, if necessary, setup BIOS utility of expansion card from BIOS.
8. Install related driver from the operating system.

Installing a PCI Express x 16 expansion card:

Please carefully pull out the small white-drawable bar at the end of the PCI Express x 16 slot when you try to install/uninstall the VGA card. Please align the VGA card to the onboard PCI Express x 16 slot and press firmly down on the slot. Make sure your VGA card is locked by the small white-drawable bar.
1-6  I/O Back Panel Introduction

PS/2 Keyboard and PS/2 Mouse Connector
To install a PS/2 port keyboard and mouse, plug the mouse to the upper port (green) and the keyboard to the lower port (purple).

Parallel Port
The parallel port allows connection of a printer, scanner and other peripheral devices.

SPDIF_I (SPDIF In)
Use SPDIF In feature only when your device has digital output function.

SPDIF_O (SPDIF Out)
The SPDIF output is capable of providing digital audio to external speakers or compressed AC3 data to an external Dolby Digital Decoder.

COM A (Serial Port)
Connects to serial-based mouse or data processing devices.

USB port
Before you connect your device(s) into USB connector(s), please make sure your device(s) such as USB keyboard, mouse, scanner, zip, speaker...etc. have a standard USB interface. Also make sure your OS supports USB controller. If your OS does not support USB controller, please contact OS vendor for possible patch or driver upgrade. For more information please contact your OS or device(s) vendors.

LAN Port
The provided Internet connection is Gigabit Ethernet, providing data transfer speeds of 10/100/1000Mbps.

Line In
Devices like CD-ROM, walkman etc. can be connected to Line In jack.

Line Out (Front Speaker Out)
Connect the stereo speakers, earphone or front surround speakers to this connector.

MIC In
Microphone can be connected to MIC In jack.

Center/Subwoofer Speaker Out
Connect the Center/Subwoofer speakers to this connector.

Rear Speaker Out
Connect the rear surround speakers to this connector.
### Side Speaker Out
Connect the side surround speakers to this connector.

**Note:**
You can use audio software to configure 2-/4-/6-/8-channel audio functioning.

![Diagram of the mother board with connectors labeled](image-url)
1/2) **ATX_12V / ATX (Power Connector)**

With the use of the power connector, the power supply can supply enough stable power to all the components on the motherboard. Before connecting the power connector, please make sure that all components and devices are properly installed. Align the power connector with its proper location on the motherboard and connect tightly.

The ATX_12V power connector mainly supplies power to the CPU. If the ATX_12V power connector is not connected, the system will not start.

**Caution!**

Please use a power supply that is able to handle the system voltage requirements. It is recommended that a power supply that can withstand high power consumption be used (300W or greater). If a power supply is used that does not provide the required power, the result can lead to an unstable system or a system that is unable to start.

If you use a 24-pin ATX power supply, please remove the small cover on the power connector on the motherboard before plugging in the power cord; Otherwise, please do not remove it.

3/4) **CPU_FAN / SYS_FAN (Cooler Fan Power Connector)**

The cooler fan power connector supplies a +12V power voltage via a 3-pin power connector and possesses a foolproof connection design. Most coolers are designed with color-coded power connector wires. A red power connector wire indicates a positive connection and requires a +12V power voltage. The black connector wire is the ground wire (GND).

Please remember to connect the power to the cooler to prevent system overheating and failure.

**Caution!**

Please remember to connect the power to the CPU fan to prevent CPU overheating and failure.

5) **FDD (FDD Connector)**

The FDD connector is used to connect the FDD cable while the other end of the cable connects to the FDD drive. The types of FDD drives supported are: 360KB, 720KB, 1.2MB, 1.44MB and 2.88MB.

Please connect the red power connector wire to the pin1 position.
6) **IDE1 / IDE2 (IDE Connector)**

An IDE device connects to the computer via an IDE connector. One IDE connector can connect to one IDE cable, and the single IDE cable can then connect to two IDE devices (hard drive or optical drive). If you wish to connect two IDE devices, please set the jumper on one IDE device as Master and the other as Slave (for information on settings, please refer to the instructions located on the IDE device).

7) **SATAII0_1 / SATAII2_3 (Serial ATA Connector)**

Serial ATA can provide up to 150MB/s transfer rate. Please refer to the BIOS setting for the Serial ATA and install the proper driver in order to work properly.
8) **F_PANEL (Front Panel Jumper)**

Please connect the power LED, PC speaker, reset switch and power switch etc of your chassis front panel to the F_PANEL connector according to the pin assignment below.

<table>
<thead>
<tr>

10) **F_AUDIO (Front Audio Panel Connector)**

If you want to use Front Audio connector, you must remove 5-6, 9-10 Jumper.
In order to utilize the front audio header, your chassis must have front audio connector. Also please make sure the pin assignments for the cable are the same as the pin assignments for the front audio header. To find out if the chassis you are buying support front audio connector, please contact your dealer. Please note, you can have the alternative of using front audio connector or of using rear audio connector to play sound.

- 4 | CD-R

12) **F_USB1 / F_USB2 / F_USB3 (Front USB Connector)**

Be careful with the polarity of the front USB connector. Check the pin assignment carefully while you connect the front USB cable, incorrect connection between the cable and connector will make the device unable to work or even damage it. For optional front USB cable, please contact your local dealer.

- **Pin No.** | **Definition**
- 1 | Power
- 2 | Power
- 3 | USB DX-
- 4 | USB Dy-
- 5 | USB DX+
- 6 | USB Dy+
- 7 | GND
- 8 | GND
- 9 | No Pin
- 10 | NC
13) COMB (COMB Connector)
Be careful with the polarity of the COMB connector. Check the pin assignments while you connect the COMB cable. Please contact your nearest dealer for optional COMB cable.

<table>
<thead>
<tr>

15) CLR_CMOS (Clear CMOS)
You may clear the CMOS data to its default values by this jumper. To clear CMOS, temporarily short 1-2 pin. Default doesn't include the "Shunter" to prevent from improper use this jumper.

16) BAT (Battery)

- Danger of explosion if battery is incorrectly replaced.
- Replace only with the same or equivalent type recommended by the manufacturer.
- Dispose of used batteries according to the manufacturer's instructions.

If you want to erase CMOS...
1. Turn OFF the computer and unplug the power cord.
2. Take out the battery gently and put it aside for about 10 minutes (Or you can use a metal object to connect the positive and negative pins in the battery holder to make them short for one minute).
3. Re-install the battery.
4. Plug the power cord and turn ON the computer.
Chapter 2 BIOS Setup

BIOS (Basic Input and Output System) includes a CMOS SETUP utility which allows user to configure required settings or to activate certain system features.

The CMOS SETUP saves the configuration in the CMOS SRAM of the motherboard.

When the power is turned off, the battery on the motherboard supplies the necessary power to the CMOS SRAM.

When the power is turned on, pushing the <Del> button during the BIOS POST (Power-On Self Test) will take you to the CMOS SETUP screen. You can enter the BIOS setup screen by pressing "Ctrl + F1".

When setting up BIOS for the first time, it is recommended that you save the current BIOS to a disk in the event that BIOS needs to be reset to its original settings. If you wish to upgrade to a new BIOS, either GIGABYTE’s Q-Flash or @BIOS utility can be used.

Q-Flash allows the user to quickly and easily update or backup BIOS without entering the operating system. @BIOS is a Windows-based utility that does not require users to boot to DOS before upgrading BIOS but directly download and update BIOS from the Internet.

Main Menu

The on-line description of the highlighted setup function is displayed at the bottom of the screen.

Status Page Setup Menu / Option Page Setup Menu

Press <F1> to pop up a small help window that describes the appropriate keys to use and the possible selections for the highlighted item. To exit the Help Window press <Esc>.

Because BIOS flashing is potentially risky, please do it with caution and avoid inadequate operation that may result in system malfunction.
The BIOS Setup menus described in this chapter are for reference only and may differ from the exact settings for your motherboard.

The Main Menu (For example: BIOS Ver. : F1b)

Once you enter Award BIOS CMOS Setup Utility, the Main Menu (as figure below) will appear on the screen. Use arrow keys to select among the items and press <Enter> to accept or enter the sub-menu.

```
Standard CMOS Features
This setup page includes all the items in standard compatible BIOS.

Advanced BIOS Features
This setup page includes all the items of Award special enhanced features.

Integrated Peripherals
This setup page includes all onboard peripherals.

Power Management Setup
This setup page includes all the items of Green function features.

PnP/PCI Configuration
This setup page includes all the configurations of PCI & PnP ISA resources.

PC Health Status
This setup page is the System auto detect Temperature, voltage, fan, speed.

MB Intelligent Tweaker(M.I.T.)
This setup page is control CPU clock and frequency ratio.

Top Performance
If you wish to maximize the performance of your system, enable Top Performance.

Load Optimized Defaults
Optimized Defaults indicates the value of the system parameters which the system would be in bestperformance configuration.

If you can't find the setting you want, please press "Ctrl+F1" to search the advanced option hidden.
- Set Supervisor Password
  Change, set, or disable password. It allows you to limit access to the system and Setup, or just to Setup.

- Set User Password
  Change, set, or disable password. It allows you to limit access to the system.

- Save & Exit Setup
  Save CMOS value settings to CMOS and exit setup.

- Exit Without Saving
  Abandon all CMOS value changes and exit setup.
2-1 Standard CMOS Features

The date format is <week>, <month>, <day>, <year>.

- **Week**: The week, from Sun to Sat, determined by the BIOS and is display only.
- **Month**: The month, Jan. Through Dec.
- **Day**: The day, from 1 to 31 (or the maximum allowed in the month).
- **Year**: The year, from 1999 through 2098.

The time format is <hour> <minute> <second>. The time is calculated base on the 24-hour military-time clock. For example, 1 p.m. is 13:00:00.

### IDE Channel 0 Master, Slave, IDE Channel 1 Master, Slave

- **IDE HDD Auto-Detection**: Press "Enter" to select this option for automatic device detection.
- **IDE Device Setup**: You can use one of three methods:
  - **Auto**: Allows BIOS to automatically detect IDE devices during POST (default).
  - **None**: Select this if no IDE devices are used and the system will skip the automatic detection step and allow for faster system start up.
  - **Manual**: User can manually input the correct settings.
- **Access Mode**: Use this to set the access mode for the hard drive. The four options are: CHS/LBA/Large/Auto (default: Auto).

### IDE Channel 2/3/4/5 Master

- **IDE HDD Auto-Detection**: Press "Enter" to select this option for automatic device detection.
- **Extended IDE Drive SATA devices setup**: You can use one of two methods:
  - **Auto**: Allows BIOS to automatically detect SATA IDE devices during POST. (Default value)
  - **None**: Select this if no SATA IDE devices are used and the system will skip the automatic detection step and allow for faster system start up.
Access Mode Use this to set the access mode for the hard drive. The two options are:
- Large/Auto (default: Auto)

Capacity Capacity of currently installed hard disk.

Hard drive information should be labeled on the outside drive casing. Enter the appropriate option based on this information.

- Cylinder Number of cylinders
- Head Number of heads
- Precomp Write precomp
- Landing Zone Landing zone
- Sector Number of sectors

Drive A / Drive B
The category identifies the types of floppy disk drive A or drive B that has been installed in the computer.

- None No floppy drive installed
- 360K, 5.25" 5.25 inch PC-type standard drive; 360K byte capacity.
- 1.2M, 5.25" 5.25 inch AT-type high-density drive; 1.2M byte capacity (3.5 inch when 3 Mode is Enabled).
- 720K, 3.5" 3.5 inch double-sided drive; 720K byte capacity
- 1.44M, 3.5" 3.5 inch double-sided drive; 1.44M byte capacity. (Default value)
- 2.88M, 3.5" 3.5 inch double-sided drive; 2.88M byte capacity.

Halt on
The category determines whether the computer will stop if an error is detected during power up.

- No Errors The system boot will not stop for any error that may be detected and you will be prompted.
- All Errors Whenever the BIOS detects a non-fatal error the system will be stopped.
- All, But Keyboard The system boot will not stop for a keyboard error; it will stop for all other errors. (Default value)
- All, But Diskette The system boot will not stop for a disk error; it will stop for all other errors.
- All, But Disk/Key The system boot will not stop for a keyboard or disk error; it will stop for all other errors.

Floppy 3 Mode Support (for Japan Area)

- Disabled Normal Floppy Drive. (Default value)
- Drive A Drive A is 3 mode Floppy Drive.
- Drive B Drive B is 3 mode Floppy Drive.
- Both Drive A & B are 3 mode Floppy Drives.
2-2 Advanced BIOS Features

<table>
<thead>
<tr>
<th>Item Help</th>
<th>Menu Level</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Select Hard Disk Boot Device Priority</td>
</tr>
</tbody>
</table>

→ **Hard Disk Boot Priority**
Select boot sequence for onboard(or add-on cards) SCSI, RAID, etc.
Use <↑> or <↓> to select a device, then press<→> to move it up, or <-> to move it down the list. Press <ESC> to exit this menu.

→ **First / Second / Third Boot Device**
- **Floppy** Select your boot device priority by Floppy.
- **LS120** Select your boot device priority by LS120.
- **Hard Disk** Select your boot device priority by Hard Disk.
- **CDROM** Select your boot device priority by CDROM.
- **ZIP** Select your boot device priority by ZIP.
- **USB-FDD** Select your boot device priority by USB-FDD.
- **USB-ZIP** Select your boot device priority by USB-ZIP.
- **USB-CDROM** Select your boot device priority by USB-CDROM.
- **USB-HDD** Select your boot device priority by USB-HDD.
- **Legacy LAN** Select your boot device priority by Legacy LAN.
- **Disabled** Disable this function.

→ **Boot Up Floopy Seek**
During POST, BIOS will determine the floppy disk drive installed is 40 or 80 tracks. 360K type is 40 tracks 720K, 1.2M and 1.44M are all 80 tracks.
- **Enabled** BIOS searches for floppy disk drive to determine it is 40 or 80 tracks. Note that BIOS can not tell from 720K, 1.2M or 1.44M drive type as they are all 80 tracks.
- **Disabled** BIOS will not search for the type of floppy disk drive by track number. Note that there will not be any warning message if the drive installed is 360K. (Default value)
Password Check

- System: The system cannot boot and cannot access to Setup page will be denied if the correct password is not entered at the prompt.
- Setup: The system will boot, but access to Setup will be denied if the correct password is not entered at the prompt. (Default value)

Init Display First

This feature allows you to select the first initiation of the monitor display from which card when you install a PCI card and a PCI Express VGA card on the motherboard.

- PEG: Set Init display first to PCI Express VGA card. (Default value)
- PCI slot: Set Init display first to PCI.

**On-Chip IDE Channel0**

- **Enabled**: Enable onboard 1st channel IDE port. (Default value)
- **Disabled**: Disable onboard 1st channel IDE port.

**On-Chip IDE Channel1**

- **Enabled**: Enable onboard 2nd channel IDE port. (Default value)
- **Disabled**: Disable onboard 2nd channel IDE port.

**IDE DMA transfer access**

- **Enabled**: Enable IDE DMA transfer access. (Default value)
- **Disabled**: Disable this function.
On-Chip MAC Lan
- Auto: Auto-detect onboard LAN chip function. (Default value)
- Disabled: Disable onboard LAN chip function.

NV IDE/SATA RAID function
- Enabled: Enable NV IDE/SATA RAID function. (Default value)
- Disabled: Disable this function.

IDE Primary Master RAID
- Enabled: Enable 1st master channel IDE RAID function.
- Disabled: Disable this function. (Default value)

IDE Primary Slave RAID
- Enabled: Enable 1st slave channel IDE RAID function.
- Disabled: Disable this function. (Default value)

IDE Secndry Master RAID
- Enabled: Enable 2nd master channel IDE RAID function.
- Disabled: Disable this function. (Default value)

IDE Secndry Slave RAID
- Enabled: Enable 2nd slave channel IDE RAID function.
- Disabled: Disable this function. (Default value)

NV Serial-ATA 1
- Enabled: Enable Serial ATA 1 supported. (Default value)
- Disabled: Disable Serial ATA 1 supported.

NV SATA 1 Primary RAID
- Enabled: Enable 1st SATA primary RAID function.
- Disabled: Disable this function. (Default value)

NV SATA 1 Secondary RAID
- Enabled: Enable 1st SATA secondary RAID function.
- Disabled: Disable this function. (Default value)

NV Serial-ATA 2
- Enabled: Enable Serial ATA 2 supported. (Default value)
- Disabled: Disable Serial ATA 2 supported.

NV SATA 2 Primary RAID
- Enabled: Enable 2nd SATA primary RAID function.
- Disabled: Disable this function. (Default value)

NV SATA 2 Secondary RAID
- Enabled: Enable 2nd SATA secondary RAID function.
- Disabled: Disable this function. (Default value)

IDE Prefetch Mode
- Enabled: Enable IDE Prefetch mode. (Default value)
- Disabled: Disable IDE Prefetch mode.
USB Memory Type
- SHADOW Set USB memory type to SHADOW. (Default value)
- Base Memory(640K) Set USB memory type to base memory(640K).

AC97 Audio
- Auto Enable onboard AC'97 audio function. (Default value)
- Disabled Disable this function.

Onboard Serial Port 1
- Auto BIOS will automatically setup the Serial port 1 address.
- 3F8/IRQ4 Enable onboard Serial port 1 and address is 3F8/IRQ4. (Default value)
- 2F8/IRQ3 Enable onboard Serial port 1 and address is 2F8/IRQ3.
- 3E8/IRQ4 Enable onboard Serial port 1 and address is 3E8/IRQ4.
- 2E8/IRQ3 Enable onboard Serial port 1 and address is 2E8/IRQ3.
- Disabled Disable onboard Serial port 1.

Onboard Serial Port 2
- Auto BIOS will automatically set up the Serial port 2 address.
- 3F8/IRQ4 Enable onboard Serial port 2 and address is 3F8/IRQ4.
- 2F8/IRQ3 Enable onboard Serial port 2 and address is 2F8/IRQ3. (Default value)
- 3E8/IRQ4 Enable onboard Serial port 2 and address is 3E8/IRQ4.
- 2E8/IRQ3 Enable onboard Serial port 2 and address is 2E8/IRQ3.
- Disabled Disable onboard Serial port 2.

Onboard Parallel Port
- Disabled Disable onboard LPT port.
- 378/IRQ7 Enable onboard LPT port and address is 378/IRQ7. (Default value)
- 278/IRQ5 Enable onboard LPT port and address is 278/IRQ5.
- 3BC/IRQ7 Enable onboard LPT port and address is 3BC/IRQ7.

Parallel Port Mode
- SPP Using Parallel port as Standard Parallel Port. (Default value)
- EPP Using Parallel port as Enhanced Parallel Port.
- ECP Using Parallel port as Extended Capabilities Port.
- ECP+EPP Using Parallel port as ECP and EPP mode.

ECP Mode Use DMA
- 3 Set ECP Mode Use DMA to 3. (Default value)
- 1 Set ECP Mode Use DMA to 1.

On-Chip USB
- Disabled Disable this function if you are not using onboard USB function.
- V1.1+V2.0 Enable USB 1.1 and USB 2.0 controller. (Default value)
- V1.1 Enable only USB 1.1 controller.

Legacy USB Keyboard/Storage
- Enabled Enable USB keyboard support in the MS-DOS environment.
- Disabled Disable this function. (Default value)
2-4  Power Management Setup

- **Legacy (DOS) USB Mouse**
  - Enabled: Enable USB mouse support in the MS-DOS environment.
  - Disabled: Disable this function. (Default value)

- **Legacy USB Storage detect**
  - Enabled: Enable USB storage detect function. (Default value)
  - Disabled: Disable this function.

- **ACPI Suspend Type**
  - S1(POS): Set ACPI suspend type to S1/POS(Power On Suspend). (Default value)
  - S3(STR): Set ACPI suspend type to S3/STR(Suspend To RAM).

- **Soft-Off by Power button**
  - Instant-off: Press power button then Power off instantly. (Default value)
  - Delay 4 Sec: Press power button 4 seconds to Power off. Enter suspend if button is pressed less than 4 seconds.

- **PME Event Wake Up**
  - This feature requires an ATX power supply that provides at least 1A on the 5VSB lead.
  - Disabled: Disable this function. (Default value)
  - Enabled: Enable PME as wake up event.

- **Modem Ring On**
  - Disabling call via modem can awake the system from any suspend state.
  - Disabled: Disable Modem Ring on function. (Default value)
  - Enabled: Enable Modem Ring on function.
USB Resume from Suspend
- Disabled: Disable this function. (Default value)
- Enabled: Enable USB device wake up system from suspend type.

Power-On by Alarm
You can set "Resume by Alarm" item to enabled and key in Date/Time to power on system.
- Disabled: Disable this function. (Default value)
- Enabled: Enable alarm function to POWER ON system.
If Power-On by Alarm is Enabled.
- Day of Month Alarm: Everyday, 1~31
- Time (hh: mm: ss) Alarm: (0~23) : (0~59) : (0~59)

Power On By Mouse
- Disabled: Disable this function. (Default value)
- Double Click: Double click on PS/2 mouse left button to power on the system.

Power On By Keyboard
- Disabled: Disable this function. (Default value)
- Password: Enter from 1 to 5 characters to set the Keyboard Power On Password.
- Any KEY: Press any key to power on the system.
- Keyboard 98: If your keyboard have "POWER Key" button, you can press the key to power on the system.

KB Power ON Function
When "Power On by Keyboard" set at Password, you can set the password here.
- Enter: Input password (from 1 to 5 characters) and press Enter to set the Keyboard Power On password.

AC BACK Function
- Soft-Off: When AC-power back to the system, the system will be in "Off" state. (Default value)
- Full-On: When AC-power back to the system, the system always in "On" state.
2-5  PnP/PCI Configurations

- PCI 1 IRQ Assignment
  - Auto: Auto assign IRQ to PCI 1. (Default value)
  - 3,4,5,7,9,10,11,12,14,15: Set IRQ 3,4,5,7,9,10,11,12,14,15 to PCI 1.

- PCI 2 IRQ Assignment
  - Auto: Auto assign IRQ to PCI 2. (Default value)
  - 3,4,5,7,9,10,11,12,14,15: Set IRQ 3,4,5,7,9,10,11,12,14,15 to PCI 2.

- PCI 3 IRQ Assignment
  - Auto: Auto assign IRQ to PCI 3. (Default value)
  - 3,4,5,7,9,10,11,12,14,15: Set IRQ 3,4,5,7,9,10,11,12,14,15 to PCI 3.

</tr>
</tbody>
</table>

- **x CPU FAN: Low speed**: 8
- **x CPU FAN: Mid speed**: 12
- **x CPU FAN: High speed**: 80
- **x Temp of FAN turn off**: 0
- **x Temp Limit of Low Speed**: 20

### Temp Limits

<table>
<thead>
<tr>
<th>Item Help</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Item Help</td>
<td></td>
</tr>
<tr>
<td>Menu Level</td>
<td></td>
</tr>
</tbody>
</table>

- **x Temp Limit of Mid Speed**: 50
- **x Temp Limit of High Speed**: 60
- **x Temp of full FAN speed**: 70

---

**Note:** The CPU fan runs at full speed when both **CPU Smart FAN Control** and **CPU FAN Manual Control** are disabled.
- Reset Case Open Status
  - Disabled: Don't reset case open status. (Default value)
  - Enabled: Clear case open status at next boot.

- Case Opened
  If the case is closed, "Case Opened" will show "No".
  If the case have been opened, "Case Opened" will show "Yes".
  If you want to reset "Case Opened" value, set "Reset Case Open Status" to "Enabled" and save CMOS, your computer will restart.

- Current Voltage(V)
  - Detect system's voltage status automatically.

- Current CPU Temperature
  - Detect CPU temperature automatically.

- Current CPU/SYSTEM FAN Speed (RPM)
  - Detect CPU/SYSTEM fan speed status automatically.

- CPU Warning Temperature
  - 60°C / 140°F: Monitor CPU temperature at 60°C / 140°F.
  - 70°C / 158°F: Monitor CPU temperature at 70°C / 158°F.
  - 80°C / 176°F: Monitor CPU temperature at 80°C / 176°F.
  - 90°C / 194°F: Monitor CPU temperature at 90°C / 194°F.
  - Disabled: Disable this function. (Default value)

- CPU FAN Fail Warning
  - Disabled: Disable CPU fan fail warning function. (Default value)
  - Enabled: Enable CPU fan fail warning function.

- CPU Smart FAN Control (Note)
  - Disabled: Disable this function. (Default Value)
  - Enabled: When this function is enabled, CPU fan will run at different speed depending on CPU temperature. Users can adjust the fan speed with Easy Tune based on their requirements.

- CPU FAN Manual Control
  CPU Smart Fan Control will become disabled when this item is enabled.
  - Enabled: Enable the CPU fan manual control function.
  - Disabled: Disable the CPU fan manual control function. (Default value)

- CPU FAN: Low Speed
  - Set the parameter of the CPU fan speed.
  The CPU FAN: Low Speed option configures the speed of the CPU fan when the CPU temperature is below the temperature set in Temp Limit of Mid Speed. The parameter can be adjusted from 0~127. Higher parameter means faster CPU fan speed. (Default parameter: 8)

(Note) The CPU fan runs at full speed when both CPU Smart FAN Control and CPU FAN Manual Control are disabled.

(Note) Whether the CPU fan speed control function is supported will depend on the CPU cooler you install.
CPU FAN: Mid Speed

Set the parameter of the CPU fan speed.
The CPU FAN: Mid Speed option configures the speed of the CPU fan when the CPU temperature exceeds the temperature set in Temp Limit of Mid Speed. The parameter can be adjusted from 0~127. Higher parameter means faster CPU fan speed. (Default parameter: 12)

CPU FAN: High Speed

Set the parameter of the CPU fan speed.
The CPU FAN: High Speed option configures the speed of the CPU fan when the CPU temperature exceeds the temperature set in Temp Limit of High Speed. The parameter can be adjusted from 0~127. Higher parameter means faster CPU fan speed. (Default parameter: 80)

Temp of FAN turn off (Default temperature: 0°C)

When the CPU temperature is below the value set in this option, the CPU fan will stop spinning.

Temp Limit of Low Speed (Default temperature: 20°C)

The CPU fan will stop spinning when the CPU temperature is below the value set in Temp of FAN turn off option. The CPU fan will start to spin again with the parameter set in CPU FAN: Low Speed when the CPU temperature exceeds the value set in Temp Limit of Low Speed.

Temp Limit of Mid Speed (Default temperature: 50°C)

When the CPU temperature exceeds the value set in this option, the CPU fan spins with the parameter specified in CPU FAN: Mid Speed. For example, by default, when the CPU temperature exceeds 50°C, CPU fan runs with parameter 12.

Temp Limit of High Speed (Default temperature: 60°C)

When the CPU temperature exceeds the value set in this option, the CPU fan rotates with the parameter specified in CPU FAN: High Speed. For example, by default, when the CPU temperature exceeds 60°C, CPU fan runs with parameter 80.

Temp of full FAN Speed (Default temperature: 70°C)

When the CPU temperature exceeds the value set in this option, the CPU fan runs at full speed.
2-7  MB Intelligent Tweaker(M.I.T.)

Incorrect using these features may cause your system broken. For power end-user use only.

CPU Frequency
- 200 ~ 456
  Set CPU frequency from 200Mhz to 456Mhz.

K8 CPU Clock Ratio
- Default
  Set K8 CPU Clock Ratio to CPU factory default.
- x5 1000Mhz ~ x10 2000Mhz
  Set K8 CPU Clock Ratio from x5 1000Mhz to x10 2000Mhz.

CPU Spread Spectrum
- Disabled
  Disable CPU Spread Spectrum.
- Center Spread
  Set CPU Spread Spectrum to Center Spread. (Default value)

PCIE Clock
- 100Mhz ~ 150Mhz
  Set PCI-E clock from 100Mhz to 150Mhz.

Robust Graphics Booster
Select the options can enhance the VGA graphics card bandwidth to get higher performance.
- Auto
  Set Robust Graphics Booster to Auto. (Default value)
- Fast
  Set Robust Graphics Booster to Fast.
- Turbo
  Set Robust Graphics Booster to Turbo.

DDR voltage control
Please note that by overclocking your system through the increase of the DDR voltage, damage to the memory may occur.
- Normal
  Set DDR voltage control to Normal. (Default value)
- +0.1V
  Set DDR voltage control to +0.1V.
- +0.2V
  Set DDR voltage control to +0.2V.
**2-8 Top Performance**

If you wish to maximize the performance of your system, enable "Top Performance."

- **Disabled** Disable this function. (Default Value)
- **Enabled** Enable Top Performance function.

* "Top Performance" will increase H/W working speed. Different system configuration (both H/W component and OS) will effect the result. For example, the same H/W configuration might not run properly with Windows XP, but works smoothly with Windows NT. Therefore, if your system is not perform enough, the reliability or stability problem will appear sometimes, and we will recommend you disabling the option to avoid the problem as mentioned above.

**2-9 Load Optimized Defaults**

Selecting this field loads the factory defaults for BIOS and Chipset Features which the system automatically detects.
2-10  Set Supervisor/User Password

When you select this function, the following message will appear at the center of the screen to assist you in creating a password.
Type the password, up to eight characters, and press <Enter>. You will be asked to confirm the password. Type the password again and press <Enter>. You may also press <Esc> to abort the selection and not enter a password.
To disable password, just press <Enter> when you are prompted to enter password. A message "PASSWORD DISABLED" will appear to confirm the password being disabled. Once the password is disabled, the system will boot and you can enter Setup freely.
The BIOS Setup program allows you to specify two separate passwords: SUPERVISOR PASSWORD and a USER PASSWORD. When disabled, anyone may access all BIOS Setup program function. When enabled, the Supervisor password is required for entering the BIOS Setup program and having full configuration fields, the User password is required to access only basic items.
If you select "System" at "Password Check" in Advance BIOS Features Menu, you will be prompted for the password every time the system is rebooted or any time you try to enter Setup Menu.
If you select "Setup" at "Password Check" in Advance BIOS Features Menu, you will be prompted only when you try to enter Setup.
2-11 **Save & Exit Setup**

Type "Y" will quit the Setup Utility and save the user setup value to RTC CMOS.
Type "N" will return to Setup Utility.

2-12 **Exit Without Saving**

Type "Y" will quit the Setup Utility without saving to RTC CMOS.
Type "N" will return to Setup Utility.
Chapter 3 Drivers Installation

Pictures below are shown in Windows XP.
Insert the driver CD-title that came with your motherboard into your CD-ROM drive, the driver CD-title will auto start and show the installation guide. If not, please double click the CD-ROM device icon in "My computer", and execute the Setup.exe.

3-1 Install Chipset Drivers

After insert the driver CD, "Xpress Install" will scan automatically the system and then list all the drivers that recommended to install. The "Xpress Install" uses the "Click and Go" technology to install the drivers automatically. Just select the drivers you want then click the "GO" button. The "Xpress Install" will execute the installation for you automatically.

Some device drivers will restart your system automatically. After restarting your system the "Xpress Install" will continue to install other drivers.
System will reboot automatically after install the drivers, afterward you can install others application.

For USB2.0 driver support under Windows XP operating system, please use Windows Service Pack. After install Windows Service Pack, it will show a question mark "?" in "Universal Serial Bus controller" under "Device Manager". Please remove the question mark and restart the system (System will auto-detect the right USB2.0 driver).
3-2 Software Application

This page displays all the tools that Gigabyte developed and some free software, you can choose anyone you want and press "install" to install them.

![Software Application Screenshot]

3-3 Software Information

This page lists the contents of software and drivers in this CD-title.

![Software Information Screenshot]
3-4 Hardware Information

This page lists all device you have for this motherboard.

3-5 Contact Us

Please see the last page for details.
Chapter 4 Appendix

4-1 Unique Software Utilities
(Not all models support these Unique Software Utilities, please check your MB features.)

U-PLUS D.P.S. (Universal Plus Dual Power System)
The U-Plus Dual Power System (U-Plus DPS) is a revolutionary eight-phase power circuit built for ultimate system protection. Designed to withstand varying current levels and changes, the U-Plus D.P.S. provides an immensely durable and stable power circuit to the CPU for solid system stability. These characteristics make it the ideal companion with the latest LGA775 Intel® Pentium® 4 Processor as well as future Intel® processors. As well, 4 blue LED's are mounted on the U-Plus D.P.S. for intelligent indication of system loading.

M.I.T. (Motherboard Intelligent Tweaker)
Motherboard Intelligent Tweaker (M.I.T.) allows user to access and change BIOS feature settings with relative speed and ease. Through GIGABYTE M.I.T. feature the user is no longer required to switch into different modes within BIOS setup in order to change system settings such as the CPU system bus, memory timings or to enabled Gigabyte’s unique C.I.A. 2 and M.I.B. 2 features. M.I.T.’s integration of all platform performance settings into a single mode now gives any user the ability to control and enhance their computer system to the desired level.

C.I.A.2 (CPU Intelligent Accelerator 2)
GIGABYTE CPU Intelligent Accelerator 2 (C.I.A. 2) is designed to automatically adjust CPU computing power to maximize system performance. When enabled, the program detects the current CPU loading and automatically accelerates the CPU computing performance to allow for a faster and smoother execution of programs. When the function is disabled, the CPU is returned to its initial status.

M.I.B.2 (Memory Intelligent Booster 2)
Built on the original M.I.B., the new Memory Intelligent Booster 2 (M.I.B. 2) is designed especially to maximize memory performance and boost memory bandwidth up to 10%. With added branded memory module information, users are able to optimize memory performance by selecting from a recommended memory module list.

S.O.S. (System Overclock Saver)
System Overclock Saver (S.O.S.) is a unique feature that eliminates system boot-up errors resulting from system over-enhancement by the user. With GIGABYTE’s proprietary S.O.S. feature, users no longer need to open up the PC chassis and short-circuit the “Clear CMOS” pins or the battery on the motherboard to reset the system back to factory default settings. Instead, S.O.S. automatically resets the overclocked system settings back to their factory defaults to provide a more user-friendly and reliable platform for users.

Download Center
Download Center allows users to quickly download and update their BIOS as well as the latest drivers for their system. Download Center automatically runs a system check of the user PC and provides the user with the current system information as well as displaying a detailed list of all new drivers with the option for download.

C.O.M. (Corporate Online Management)
A web-based system management tool that allows system hardware information such as CPU, memory, graphics card, etc. to be monitored and controlled via the Internet, C.O.M. allows corporate MIS engineers to easily maintain corporate computers such as providing the most up-to-date drivers and BIOS. (Do not use C.O.M. and @BIOS at the same time.)
4-1-1 EasyTune 5 Introduction

EasyTune 5 presents the most convenient Windows based system performance enhancement and manageability utility. Featuring several powerful yet easy to use tools such as 1) Overclocking for enhancing system performance, 2) C.I.A. and M.I.B. for special enhancement for CPU and Memory, 3) Smart-Fan control for managing fan speed control of both CPU cooling fan and North-Bridge Chipset cooling fan, 4) PC health for monitoring system status. (Note)

(Note) EasyTune 5 functions may vary depending on different motherboards.
4-1-2 Xpress Recovery Introduction

What is Xpress Recovery?
Xpress Recovery is a utility used to back up and restore an OS partition. If the hard drive is not working properly, the user can restore the drive to its original state.

1. Supports FAT16, FAT32, and NTFS formats
2. Must be connected to the IDE1 Master
3. Allows installation of only one OS
4. Must be used with an IDE hard disk supporting HPA
5. The first partition must be set as the boot partition. When the boot partition is backed up, please do not alter its size.
6. Xpress Recovery is recommended when using Ghost to return boot manager to NTFS format.

How to use the Xpress Recovery
1. Boot from CD-ROM (BMP Mode)
Enter the BIOS menu, select "Advanced BIOS Feature" and set to boot from CD-ROM. Insert the provided driver CD into your CD drive, then save and exit the BIOS menu. Once the computer has restarted, the phrase "Boot from CD:" will appear at the bottom left-hand corner of the screen. When "Boot from CD:" appears, press any key to enter Xpress Recovery. Once you have completed this step, subsequent access to Xpress Recovery can also function by pressing the F9 key during computer power on.
2. Press F9 during powering on the computer. (Text Mode)

1. If you have already entered Xpress Recovery by booting from the CD-ROM, you can enter Xpress Recovery in the future by pressing the F9 key.
2. System storage capacity as well as drive reading/writing speed will affect backup speed.
3. It is recommended that Xpress Recovery be immediately installed after OS and all required driver and software installations are complete.
1. Execute Backup Utility:

- Press B to Backup your System or Esc to Exit

The backup utility will automatically scan your system and back up data as a backup image in your hard drive.

- Not all systems support access to Xpress Recovery by pressing the F9 key during computer power on. If this is the case, please use the boot from CD-ROM method to enter Xpress Recovery.

2. Execute Restore Utility:

- Press R to restore your system back to factory default or press Esc to exit

Restores backup image to original state.

3. Remove Backup Image:

- Press B to remove backup image. Are you sure? (Y/N)

Remove the backup image.

4. Set Password:

- Please input a 4-16 character long password (a-z or 0-9) or press Esc to exit

You can set a password to enter Xpress Recovery to protect your hard disk data. Once this is done, password input will be required to enter Xpress Recovery during the next as well as subsequent system restarts. If you wish to remove the need for password entry, please select "Set Password" and under "New Password/Confirm Password", make sure there is no entry and then press "Enter" to remove password requirement.

5. Exit and Restart:

Exit and restart your computer.
Method 1: Q-Flash™ Utility

Q-Flash™ is a BIOS flash utility embedded in Flash ROM. With this utility, users only have to stay in the BIOS menu when they want to update BIOS. Q-Flash allows users to flash BIOS without any utility in DOS or Windows. Using Q-Flash indicating no more fooling around with any complicated instructions and operating system since it is in the BIOS menu.

Please note that because updating BIOS has potential risk, please do it with caution!! We are sorry that Gigabyte Technology Co., Ltd is not responsible for damages of system because of incorrect manipulation of updating BIOS to avoid any claims from end-users.

Before You Begin:
Before you start updating BIOS with the Q-Flash™ utility, please follow the steps below first.

1. Download the latest BIOS for your motherboard from Gigabyte’s website.
2. Extract the BIOS file downloaded and save the BIOS file (the one with model name.Fxx. For example, 8KNXP3U.Fba) to a floppy disk.
3. Reboot your PC and press Del to enter BIOS menu.

The BIOS upgrading guides below are separated into two parts.
If your motherboard has dual-BIOS, please refer to Part One.
If your motherboard has single-BIOS, please refer to Part Two.

Part One:
Updating BIOS with Q-Flash™ Utility on Dual BIOS Motherboards.

Some of Gigabyte motherboards are equipped with dual BIOS. In the BIOS menu of the motherboards supporting Q-Flash and Dual BIOS, the Q-Flash utility and Dual BIOS utility are combined in the same screen. This section only deals with how to use Q-Flash utility.

In the following sections, we take GA-8KNXP Ultra as the example to guide you how to flash BIOS from an older version to the latest version. For example, from Fa3 to Fba.

The BIOS file is Fa3 before updating
**Entering the Q-Flash™ utility:**

Step 1: To use Q-Flash utility, you must press Del in the boot screen to enter BIOS menu.

Step 2: Press F8 button on your keyboard and then Y button to enter the Dual BIOS/Q-Flash utility.

**Exploring the Q-Flash™ / Dual BIOS utility screen**

The Q-Flash / Dual BIOS utility screen consists of the following key components.

**Task menu for Dual BIOS utility:**
Contains the names of eight tasks and two item showing information about the BIOS ROM type. Blocking a task and pressing Enter key on your keyboard to enable execution of the task.

**Task menu for Q-Flash™ utility:**
Contains the names of four tasks. Blocking a task and pressing Enter key on your keyboard to enable execution of the task.

**Action bar:**
Contains the names of four actions needed to operate the Q-Flash/Dual BIOS utility. Pressing the buttons mentioned on your keyboards to perform these actions.
**Using the Q-Flash™ utility:**

This section tells you how to update BIOS using the Q-Flash utility. As described in the "Before you begin" section above, you must prepare a floppy disk having the BIOS file for your motherboard and insert it to your computer. If you have already put the floppy disk into your system and have entered the Q-Flash utility, please follow the steps below to flash BIOS.

**Steps:**

1. Press arrow buttons on your keyboard to "Load Main BIOS from Floppy" item in the Q-Flash menu and press Enter button.

   Later, you will see a box pop up showing the BIOS files you previously downloaded to the floppy disk.

   If you want to save the current BIOS for backup purpose, you can begin Step 1 with "Save Main BIOS to Floppy" item.

2. Move to the BIOS file you want to flash and press **Enter**.

   **In this example, we only download one BIOS file to the floppy disk so only one BIOS file, 8KNXPU.Fba, is listed.**

   Please confirm again you have the correct BIOS file for your motherboard.

   ![Q-Flash Utility](image)

   After pressing **Enter**, you'll then see the progress of reading the BIOS file from the floppy disk.

   ![Reading BIOS file from floppy](image)

   After BIOS file is read, you'll see a confirmation dialog box asking you "Are you sure to update BIOS?"
3. Press Y button on your keyboard after you are sure to update BIOS. Then it will begin to update BIOS. The progress of updating BIOS will be displayed.

⚠️ Please do not take out the floppy disk when it begins flashing BIOS.

4. Press any keys to return to the Q-Flash menu when the BIOS updating procedure is completed.

5. Press Esc and then Y button to exit the Q-Flash utility. The computer will restart automatically after you exit Q-Flash.

After system reboots, you may find the BIOS version on your boot screen becomes the one you flashed.

The BIOS file becomes Fab after updating.
6. Press **Del** to enter BIOS menu after system reboots. When you are in BIOS menu, move to **Load Fail-Safe Defaults** item and press **Enter** to load BIOS Fail-Safe Defaults. Normally the system redetects all devices after BIOS has been upgraded. Therefore, we highly recommend reloading the BIOS defaults after BIOS has been upgraded.

   **CMOS Setup Utility-Copyright (C) 1984-2004 Award Software**

   - Standard CMOS Features
   - Advanced BIOS Features
   - Integrated Peripherals
   - Power Management
   - PnP/PCI Co
   - PC Health Status
   - MB Intelligent Tweaker(M.I.T.)

   Press **Y** on your keyboard to load defaults.

7. Select **Save & Exit Setup** item to save the settings to CMOS and exit the BIOS menu. System will reboot after you exit the BIOS menu. The procedure is completed.

   **CMOS Setup Utility-Copyright (C) 1984-2004 Award Software**

   - Standard CMOS Features
   - Advanced BIOS Features
   - Integrated Peripherals
   - Power Management
   - PnP/PCI Co
   - PC Health Status
   - MB Intelligent Tweaker(M.I.T.)

   Press **Y** on your keyboard to save and exit.

**Part Two:**

**Updating BIOS with Q-Flash™ Utility on Single-BIOS Motherboards.**

This part guides users of single-BIOS motherboards how to update BIOS using the Q-Flash™ utility.
Exploring the Q-Flash™ utility screen

The Q-Flash BIOS utility screen consists of the following key components.

Task menu for Q-Flash utility:
Contains the names of three tasks. Blocking a task and pressing Enter key on your keyboard to enable execution of the task.

Action bar:
Contains the names of four actions needed to operate the Q-Flash utility. Pressing the buttons mentioned on your keyboards to perform these actions.

Using the Q-Flash™ utility:
This section tells you how to update BIOS using the Q-Flash utility. As described in the "Before you begin" section above, you must prepare a floppy disk having the BIOS file for your motherboard and insert it to your computer. If you have already put the floppy disk into your system and have entered the Q-Flash utility, please follow the steps below to flash BIOS.

Steps:
1. Press arrow buttons on your keyboard to move the light bar to "Update BIOS from Floppy" item in the Q-Flash menu and press Enter button.
   Later, you will see a box pop up showing the BIOS files you previously downloaded to the floppy disk.
   If you want to save the current BIOS for backup purpose, you can begin Step 1 with "Save BIOS to Floppy" item.

2. Move to the BIOS file you want to flash and press Enter.
   In this example, we only download one BIOS file to the floppy disk so only one BIOS file, 8GE800.F4, is listed.
   Please confirm again you have the correct BIOS file for your motherboard.

   After BIOS file is read, you'll see a confirmation dialog box asking you "Are you sure to update BIOS?"
   Please do not take out the floppy disk when it begins flashing BIOS.
3. Press Y button on your keyboard after you are sure to update BIOS. Then it will begin to update BIOS. The progress of updating BIOS will be shown at the same time.

4. Press any keys to return to the Q-Flash menu when the BIOS updating procedure is completed.

5. Press Esc and then Y button to exit the Q-Flash utility. The computer will restart automatically after you exit Q-Flash.

After system reboots, you may find the BIOS version on your boot screen becomes the one you flashed.

The BIOS file becomes F4 after updating

6. Press Del to enter BIOS menu after system reboots and "Load BIOS Fail-Safe Defaults". See how to Load BIOS Fail-Safe Defaults, please kindly refer to Step 6 to 7 in Part One.

Congratulation!! You have updated BIOS successfully!!
Method 2: @BIOS™ Utility

If you do not have a DOS startup disk, we recommend that you use the new @BIOS utility. @BIOS allows users to update their BIOS under Windows. Just select the desired @BIOS server to download the latest version of BIOS.

1. Methods and steps:
   I. Update BIOS through Internet
      a. Click "Internet Update" icon
      b. Click "Update New BIOS" icon
      c. Select @BIOS server
      d. Select the exact model name on your motherboard
      e. System will automatically download and update the BIOS.

   II. Update BIOS NOT through Internet:
      a. Do not click "Internet Update" icon
      b. Click "Update New BIOS"
      c. Please select "All Files" in dialog box while opening the old file.
      d. Please search for BIOS unzip file, downloading from internet or any other methods (such as: K8NE.F1b).
      e. Complete update process following the instruction.
III. Save BIOS
In the very beginning, there is "Save Current BIOS" icon shown in dialog box. It means to save the current BIOS version.

IV. Check out supported motherboard and Flash ROM:
In the very beginning, there is "About this program" icon shown in dialog box. It can help you check out which kind of motherboard and which brand of Flash ROM are supported.

2. Note:
I. In method I, if it shows two or more motherboard's model names to be selected, please make sure your motherboard's model name again. Selecting wrong model name will cause the system unbooted.
II. In method II, be sure that motherboard's model name in BIOS unzip file are the same as your motherboard's. Otherwise, your system won't boot.
III. In method I, if the BIOS file you need cannot be found in @BIOS™ server, please go onto Gigabyte's web site for downloading and updating it according to method II.
IV. Please note that any interruption during updating will cause system unbooted.
V. Do not use @BIOS and C.O.M. (Corporate Online Management) at the same time.
4-1-4 Serial ATA BIOS Setting Utility Introduction

RAID Levels
RAID (Redundant Array of Independent Disks) is a method of combining two hard disk drives into one logical unit. The advantage of an Array is to provide better performance or data fault tolerance. Fault tolerance is achieved through data redundant operation, where if one drives fails, a mirrored copy of the data can be found on another drive. This can prevent data loss if the operating system fails or hangs. The individual disk drives in an array are called members. The configuration information of each member is recorded in the reserved sector that identifies the drive as a member. All disk members in a formed disk array are recognized as a single physical drive to the operating system.

Hard disk drives can be combined together through a few different methods. The different methods are referred to as different RAID levels. Different RAID levels represent different performance levels, security levels and implementation costs. The RAID levels which the nVIDIA® nForce4 chipset supports are RAID 0, RAID 1, RAID 0+RAID 1 and JBOD.

RAID 0 (Striping)
RAID 0 reads and writes sectors of data interleaved between multiple drives. If any disk member fails, it affects the entire array. The disk array data capacity is equal to the number of drive members times the capacity of the smallest member. The striping block size can be set from 4KB to 128KB. RAID 0 does not support fault tolerance.

RAID 1 (Mirroring)
RAID 1 writes duplicate data onto a pair of drives and reads both sets of data in parallel. If one of the mirrored drives suffers a mechanical failure or does not respond, the remaining drive will continue to function. Due to redundancy, the drive capacity of the array is the capacity of the smallest drive. Under a RAID 1 setup, an extra drive called the spare drive can be attached. Such a drive will be activated to replace a failed drive that is part of a mirrored array. Due to the fault tolerance, if any RAID 1 drive fails, data access will not be affected as long as there are other working drives in the array.

RAID 0+1 (Striping + Mirroring)
RAID 0+1 combines the performance of data striping (RAID 0) and the fault tolerance of disk mirroring (RAID 1). Data is striped across multiple drives and duplicated on another set of drives.

JBOD (Spanning)
A spanning disk array is equal to the sum of the all drives when the drives used are having different capacities. Spanning stores data onto a drive until it is full, then proceeds to store files onto the next drive in the array. When any disk member fails, the failure affects the entire array. JBOD is not really a RAID and does not support fault tolerance.
Please follow the steps below to construct a complete RAID array:

1) Have ready your hard drives for RAID construction.  
   Note: To achieve best performance, it is recommended that the hard drives used are of similar make 
   and storage capacity.
2) Please attach the hard drive connectors to their appropriate location on the motherboard ie. IDE, SCSI, 
   or SATA.
3) Enter the motherboard BIOS and locate RAID setup (Please refer to the section on Integrated Peripherals).
4) Enter RAID setup in the BIOS and select the RAID type (For instance, enter F10 to select NVIDIA RAID; 
   Ctrl + S to select Silicon Image).
5) Complete driver installation.
6) Complete RAID utility installation.

More information on steps 4 and 5 is provided. (For more detailed setup information, please visit our website 
at http:\www.gigabyte.com.tw to read or download the information you need.)

**Configuring the NVIDIA RAID BIOS**

The NVRAID BIOS setup lets you choose the RAID array type and which hard drives you want to make part 
of the array.

**Entering the RAID BIOS Setup**

1. After rebooting your computer, wait until you see the RAID software prompting you to press **F10**. The 
   RAID prompt appears as part of the system POST and boot process prior to loading the OS. You have a few 
   seconds to press **F10** before the window disappears.

Press **F10**.

The NVIDIA RAID Utility - **Define a New Array** window appears (as Figure below).
Using the "Define a New Array" Window
If necessary, press the tab key to move from field to field until the appropriate field is highlighted.

Selecting the RAID Mode
By default, this is set to Mirroring. To change to a different RAID mode, press the down arrow key until the mode that you want appears in the RAID Mode box - either Mirroring, Striping, Spanning, or Stripe Mirroring.

Selecting the Striping Block Size
Striping block size is given in kilobytes, and affects how data is arranged on the disk. It is recommended to leave this value at the default Optimal, which is 64KB, but the values can be between 4 KB and 128 KB.

Assigning the Disks
The disks that you enabled from the RAID Config BIOS setup page appear in the Free Disks block. These are the drives that are available for use as RAID array disks. To designate a free disk to be used as a RAID array disk,
1. Tab to the Free Disks section. The first disk in the list is selected.
2. Move it from the Free Disks block to the Array Disks block by pressing the right arrow key (→). The first disk in the list is moved, and the next disk in the list is selected and ready to be moved.
3. Continue pressing the right-arrow key (→) until all the disks that you want to use as RAID array disks appear in the Array Disks block.
Completing the RAID BIOS Setup
After assigning your RAID array disks, press F7. The **Clear disk data** prompt appears.

Press **Y** if you want to wipe out all the data from the RAID array, otherwise press **N**. You must choose **Yes** if the drives were previously used as RAID drives. The **Array List** window appears, where you can review the RAID arrays that you have set up.

You can select a disk array as boot device if you want to boot operating system from an array. Use the arrow keys to select the array, then press **B** to specify the array as bootable.
Press **Enter** to view and verify details. The **Array Detail** screen appears.
The Array Detail screen shows various information about the array that you selected, such as Striping Block used, RAID Mode, Striping Width, Disk Model Name, and disk capacity.

![Array Detail Screen](image)

If you want to mark this disk as empty and wipe out all its contents, press **C**.
At the prompt, press Y to wipe out all the data, otherwise press **N**.
Press **Enter** again to go back to the previous screen and then press **Ctrl + X** to exit the RAID setup.

Now that the RAID setup has been configured from the RAID BIOS, the next step is to configure and load drivers under Windows.
**Installing the RAID drivers**

To install operating system onto a serial ATA hard disk successfully, you need to install the SATA controller driver during OS installation. Without the driver, the hard disk may not be recognized during the Windows setup process. First of all, copy the driver for the SATA controller from the motherboard driver CD-ROM to a floppy disk. See the instructions below about how to copy the driver in MS-DOS mode (Note 1). Prepare a startup disk that has CD-ROM support and a blank formatted floppy disk.

Step 1: Insert the prepared startup disk and motherboard driver CD-ROM in your system. Boot from the startup disk. Once at the A:\> prompt, change to the CD-ROM drive (example: D:\>). At the D:\> prompt, type the following two commands. Press ENTER after each command (Fig.1):

```
cd bootdrv
menu
```

Step 2: When the controller menu (Fig.2) appears, remove the startup disk and insert the blank formatted disk. Select the controller driver by pressing the corresponding letter from the menu. Your system will then automatically zip and transfer this driver file to the floppy disk. Press 0 to exit when finished.

(Each time you add a new hard drive to a RAID array, the RAID driver will have to be installed under Windows once for that hard drive. After that, the driver will not have to be installed.)

(Note 1): For users without a startup disk.

Use an alternative system and insert the GIGABYTE motherboard drive CD-ROM. From the CD-ROM drive (example: D:\) double click the MENU.exe file in the BootDrv folder. A command prompt window will open similar to that in Fig. 2.
4-1-5  2-/4-/6-/8- Channel Audio Function Introduction

This motherboard provide 6 audio connector. You are able to use 2-/4-/6-/8-channels audio feature by audio software selection.

Introduction of audio connectors:
You may connect CD-ROM/DVD-ROM, walkman or others audio input to Line In.
The front channels or earphone can be connected to Line Out (Front Speaker Out).
Connect microphone to Mic In.
Connect the rear channels to Rear Speaker Out.
Connect the Center/Subwoofer channels to Center/Subwoofer Speaker Out.
Connect the side channels to Side Speaker Out.
Following pictures are in Windows XP.

Stereo Speakers Connection and Settings:
We recommend that you use the speaker with amplifier to acquire the best sound effect if the stereo output is applied.

STEP 1:
Connect the stereo speakers or earphone to "Line Out".

STEP 2:
Following installation of the audio driver, you find a Sound Effect icon on the lower right hand taskbar.
Click the icon to select the function.

To set up an 8 channel audio configuration, you must use Audio Combo Kit (optional device).
STEP 3:
Click "Speaker Configuration" then click on the left selection bar and select "2CH Speaker" to complete 2 channel audio configuration.

4 Channel Audio Setup

STEP 1:
Connect the front channels to "Front Speaker Out", the rear channels to "Rear Speaker Out".

STEP 2:
Following installation of the audio driver, you find a Sound Effect icon on the lower right hand taskbar. Click the icon to select the function.

STEP 3:
Click "Speaker Configuration" then click on the left selection bar and select "4CH Speaker" to complete 4 channel audio configuration.
6 Channel Audio Setup

STEP 1:
Connect the front channels to "Front Speaker Out", the rear channels to "Rear Speaker Out", and the Center/Subwoofer channels to "Center/Subwoofer Speaker Out".

STEP 2:
Following installation of the audio driver, you find a Sound Effect icon on the lower right hand taskbar. Click the icon to select the function.

STEP 3:
Click "Speaker Configuration" then click on the left selection bar and select "6CH Speaker" to complete 6 channel audio configuration.
**8 Channel Audio Setup**

**STEP 1:**
Connect the front channels to "Front Speaker Out", the rear channels to "Rear Speaker Out", the Center/Subwoofer channels to "Center/Subwoofer Speaker Out", and the side channels to "Side Speaker Out".

**STEP 2:**
Following installation of the audio driver, you find a Sound Effect icon on the lower right hand taskbar. Click the icon to select the function.

**STEP 3:**
Click "Speaker Configuration" then click on the left selection bar and select "6CH Speaker" to complete 6 channel audio configuration.

**Sound Effect Configuration:**
At the sound effect menu, users can adjust sound option settings as desired.
4-2  Troubleshooting

Below is a collection of general asked questions. To check general asked questions based on a specific motherboard model, please log on to http://www.gigabyte.com.tw

Question 1: I cannot see some options that were included in previous BIOS after updating BIOS. Why?
Answer: Some advanced options are hidden in new BIOS version. Please press Ctrl and F1 keys after entering BIOS menu and you will be able to see these options.

Questions 2: Why is the light of my keyboard/optical mouse still on after computer shuts down?
Answer: In some boards, a small amount of electricity is kept on standby after computer shuts down and that's why the light is still on.

Question 3: How do I clear CMOS?
Answer: If your board has a Clear CMOS jumper, please refer to the Clear CMOS steps in the manual. If your board doesn't have such jumper, you can take off the on-board battery to leak voltage to clear CMOS. Please refer to the steps below:

Steps:
1. Turn off power.
2. Disconnect the power cord from MB.
3. Take out the battery gently and put it aside for about 10 minutes (Or you can use a metal object to connect the positive and negative pins in the battery holder to make them short for one minute).
4. Re-insert the battery to the battery holder.
5. Connect power cord to MB again and turn on power.
6. Press Del to enter BIOS and load Fail-Safe Defaults (or load Optimized Defaults).
7. Save changes and reboot the system.

Question 4: Why do I still get a weak sound after turning up the speaker to the maximum volume?
Answer: Please make sure the speaker you are using is equipped with an internal amplifier. If not, please change another speaker with power/amplifier and try again later.

Question 5: Sometimes I hear different continuous beeps from computer after system boots up. What do these beeps usually stand for?
Answer: The beep codes below may help you identify the possible computer problems. However, they are only for reference purposes. The situations might differ from case to case.

→AMI BIOS Beep Codes
*Computer gives 1 short beep when system boots successfully.
*Except for beep code 8, these codes are always fatal.
1 beep Refresh failure
2 beeps Parity error
3 beeps Base 64K memory failure
4 beeps Timer not operational
5 beeps Processor error
6 beeps 8042 - gate A20 failure
7 beeps Processor exception interrupt error
8 beeps Display memory read/write failure
9 beeps ROM checksum error
10 beeps CMOS shutdown register read/write error
11 beeps Cache memory bad

→AWARD BIOS Beep Codes
1 short: System boots successfully
2 short: CMOS setting error
1 long 1 short: DRAM or M/B error
1 long 2 short: Monitor or display card error
1 long 3 short: Keyboard error
1 long 9 short: BIOS ROM error
Continuous long beeps: DRAM error
Continuous short beeps: Power error
