WARNING!

Computer motherboards and expansion cards contain very delicate Integrated Circuit (IC) chips. To protect them against damage from static electricity, you should follow some precautions whenever you work on your computer.

1. Unplug your computer when working on the inside.
2. Use a grounded wrist strap before handling computer components. If you do not have one, touch both of your hands to a safely grounded object or to a metal object, such as the power supply case.
3. Hold components by the edges and try not touch the IC chips, leads or connectors, or other components.
4. Place components on a grounded antistatic pad or on the bag that came with the components whenever the components are separated from the system.
5. Ensure that the ATX power supply is switched off before you plug in or remove the ATX power connector on the motherboard.

Installing the motherboard to the chassis...

If the motherboard has mounting holes, but they don't line up with the holes on the base and there are no slots to attach the spacers, do not become alarmed you can still attach the spacers to the mounting holes. Just cut the bottom portion of the spacers (the spacer may be a little hard to cut off, so be careful of your hands). In this way you can still attach the motherboard to the base without worrying about short circuits. Sometimes you may need to use the plastic springs to isolate the screw from the motherboard PCB surface, because the circuit wire may be near by the hole. Be careful, don't let the screw contact any printed circuit write or parts on the PCB that are near the fixing hole, otherwise it may damage the board or cause board malfunctioning.

Chapter 2 Hardware Installation Process

2-1: Installing Processor and CPU Heat Sink

Before installing the processor and cooling fan, adhere to the following cautions:

1. The processor will overheat without the heatsink and/or fan, resulting in permanent irreparable damage.
2. Never force the processor into the socket.
3. Apply thermal grease on the processor before placing cooling fan.
4. Please make sure the CPU type is supported by the motherboard.
5. If you do not match the CPU socket Pin 1 and CPU cut edge well, it will cause improper installation. Please change the insert orientation.

2-1-1: Installing CPU

- Step 1 Raise the metal locking lever on the socket.
- Step 2 Remove the plastic covering on the CPU socket.
- Step 3 Insert the CPU with the correct orientation. The CPU only fits in one orientation.
- Step 4 Once the CPU is properly placed, please replace the plastic covering and push the metal lever back into locked position.

2-1-2: Installing Heat Sink

Step 1.
Please apply heatsink paste on the surface of the installed CPU.

Step 2.
Preparing heat sink installation kit.

Step 3.
Turn the mother board to the backside. Lock the retention module on the mother board
Make sure the position of the 4 holes on the retention module match exactly the position on the motherboard.

Step 4.
Secure the heatsink supporting-base onto the CPU socket on the mainboard.

Step 5.
Attach the power connector of the heatsink to the CPU fan header located on the motherboard.

2-2: Install memory modules

Before installing the processor and heatsink, adhere to the following warning:
When DIMM LED is ON, do not install/remove DIMM from socket.

CAUTION

GA-7BESH-RH has 8 dual inline memory module (DIMM) sockets. It supports the 4 FB-DIMM Channels Technology. The BIOS will automatically detects memory type and size during system boot. For detail DIMM installation, please refer to the following instructions.

Installation Steps:

1. Unlock a DIMM socket by pressing the retaining clips outwards.
2. Aling a DIMM on the socket such that the notch on the DIMM exactly match the notches in the socket.
3. Firmly insert the DIMM into the socket until the retaining clips snap back in place.
4. **Please note that each logical DIMM must be made of two identical DIMMs having the same device size on each and the same DIMM size.**
5. Reverse the installation steps when you want to remove the DIMM module.

Locked Retaining Clip

2-3: Connect ribbon cables, cabinet wires, and power supply

2-3-1 : I/O Back Panel Introduction

❶ PS/2 Keyboard and PS/2 Mouse Connector

To install a PS/2 port keyboard and mouse, plug the mouse to the upper port (green) and the keyboard to the lower port (purple).

❷/❸/❹ Parallel Port / Serial Port / VGA Port

This connector supports 1 standard COM port and 1 Parallel port. Device like printer can be connected to Parallel port ; mouse and modem etc can be connected to Serial port.

❺ LAN Port / USB

Before you connect your device(s) into USB connector(s), please make sure your device(s) such as USB keyboard, mouse, scanner, zip, speaker...etc. have a standard USB interface.

Also make sure your OS supports USB controller. If your OS does not support USB controller, please contact OS vendor for possible patch or driver updated. For more information please contact your OS or device(s) vendors.

3) IDE1 (IDE Connector)

Please connect first harddisk to IDE1. The red stripe of the ribbon cable must be the same side with the Pin1.

4) FDD1 (Floppy Connector)

Please connect the floppy drive ribbon cables to FDD. It supports 720K,1.2M,1.44M and 2.88Mbytes floppy disk types. The red stripe of the ribbon cable must be the same side with the Pin1.

5/ 6/ 7/ 8/ 9/ 10) SATA 1~6 (Serial ATA Connectors)

You can connect the Serial ATA device to this connector, it provides you high speed transfer rates (150MB/sec).

11) SCSI 1 (SCSI Connector)

You can connect all major SCSI peripherals to this connector. Ultra320 SCSI technology is compatible with Ultra160, Ultra2, Ultra Wide and all other previous-generation SCSI devices. The data transfer rate is up to 320 MB/sec per channel. Only compatible with Win 2000/XP/NT.

12/ 13/ 14/ 15) FAN 1/2/3 (System Front and Rear Fan Connectors)

This connector allows you to link with the cooling fan on the system case to lower the system temperature. These connectors are for system use only.

16/ 17) CPU1/2_FAN (CPU Fan Connectors)

Please note, a proper installation of the CPU cooler is essential to prevent the CPU from running under abnormal condition or damaged by overheating. The CPU fan connector supports Max. current up to 1A.

18/ 19) F_USB1/2 (Front USB Connectors)

Be careful with the polarity of the front USB connector. Check the pin assignment carefully while you connect the front USB cable, incorrect connection between the cable and connector will make the device unable to work or even damage it. For optional front USB cable, please contact your local dealer.

23) Battery

**CAUTION**

- ❖ Danger of explosion if battery is incorrectly replaced.
- ❖ Replace only with the same or equivalent type recommended by the manufacturer.
- ❖ Dispose of used batteries according to the manufacturer's instructions.

If you want to erase CMOS...

1. Turn OFF the computer and unplug the power cord.
2. Remove the battery, wait for 30 second.
3. Re-install the battery.
4. Plug the power cord and turn ON the computer.

2-5: Jumper Setting

| 2. JP_PASS1(Pasword skip) | 5. JP_LAN1 |
| 3. JP_REC1 (BIOS Recovery) | 6. JP_IBUT1 |

1) CLR_CMOS1 (Clear CMOS Jumper)

You may clear the CMOS data to its default values by this jumper.

Default value doesn't include the "Shunter" to prevent from improper use this jumper. To clear CMOS, temporarily short 1-2 pin.

1  1-2 close: Normal operation(Default setting)

1  2-3 close: Clear CMOS

2) JP_PASS1 (Skip password jumper)

Open: Normal operation (Default setting)

Short: Skip Supervisor Password in BIOS setup menu

Please remove the jumper when system reboot next time.

3) JP_REC1 (BIOS Recovery Jumper)

1  1-2 close: Enable BIOS Recovery function.

1  2-3 close: Disable this function. (Default setting)

Please remove the jumper when system access recovery floppy disk.

4/5) JP_LAN0/1 (Enable Onboard LAN0/1 device Jumper)

- 1  1-2 close: Enable onboard LAN0/1 device function. (Default setting)
- 1  2-3 close: Disable onboard LAN0/1 device function.

6) JP_IBUT1 (I-BUTTON FOR SAS or INTEL 6321ESB SATA CARD Switch Jumper)

- 1  1-2 close: Enable I-BUTTON SAS function
2-3 close: Enable I-BUTTON Intel 6321ESB SATA function
4-5 close: Enable I-BUTTON ROC CARD function

Chapter 3 BIOS Setup

BIOS Setup is an overview of the BIOS Setup Program. The program that allows users to modify the basic system configuration. This type of information is stored in battery-backed CMOS RAM so that it retains the Setup information when the power is turned off.

ENTERING SETUP

Power ON the computer and press <F2> immediately will allow you to enter Setup.

GETTINGHELP

Main Menu

The on-line description of the highlighted setup function is displayed at the bottom of the screen.

Status Page Setup Menu / Option Page Setup Menu

Press F1 to pop up a small help window that describes the appropriate keys to use and the possible selections for the highlighted item. To exit the Help Window press <Esc>.

- **Main**
This setup page includes all the items in standard compatible BIOS.
- **Advanced**
This setup page includes all the items of AMI special enhanced features.
(ex: Auto detect fan and temperature status, automatically configure hard disk parameters.)
- **Security**
Change, set, or disable password. It allows you to limit access the system and setup.
- **Server**
Server additional features enabled/disabled setup menus.
- **Boot**
This setup page include all the items of first boot function features.
- **Exit**
There are five options in this selection: Exit Saving Changes, Exit Discarding Changes, Load Optimal Defaults, Load Failsafe Defaults, and Discard Changes.

Main

Once you enter Phoenix BIOS Setup Utility, the Main Menu (Figure 1) will appear on the screen. Use arrow keys to select among the items and press <Enter> to accept or enter the sub-menu.

- ▶▶ 2.88M, 3^{1/2} in. 3^{1/2} inch double-sided drive; 2.88M byte capacity.

IDE Primary Master, Slave / Secondary Master, Slave

The category identifies the types of hard disk from drive C to F that has been installed in the computer. There are two types: auto type, and manual type. Manual type is user-definable; Auto type which will automatically detect HDD type.

Note that the specifications of your drive must match with the drive table. The hard disk will not work properly if you enter improper information for this category.

If you select User Type, related information will be asked to enter to the following items. Enter the information directly from the keyboard and press <Enter>. Such information should be provided in the documentation from your hard disk vendor or the system manufacturer.

» **TYPE**

1-39: Predefined types.

Users: Set parameters by User.

Auto: Set parameters automatically. (Default Vaules)

CD-ROM: Use for ATAPI CD-ROM drives or double click [Auto] to set all HDD parameters automatically.

ATAPI Removable: Removable disk drive is installed here.

» **Multi-Sector Transfer**

This field displays the information of Multi-Sector Transfer Mode.

Disabled: The data transfer from and to the device occurs one sector at a time.

Auto: The data transfer from and to the device occurs multiple sectors at a time if the device supports it.

» **LBA Mode**

This field shows if the device type in the specific IDE channel support LBA Mode.

» **32-Bit I/O**

Enable this function to max imize the IDE data transfer rate.

» **Transfer Mode**

This field shows the information of Teansfer Mode.

» **Ultra DMA Mode**

This filed displays the DMA mode of the device in the specific IDE channel.

Advanced Processor Options

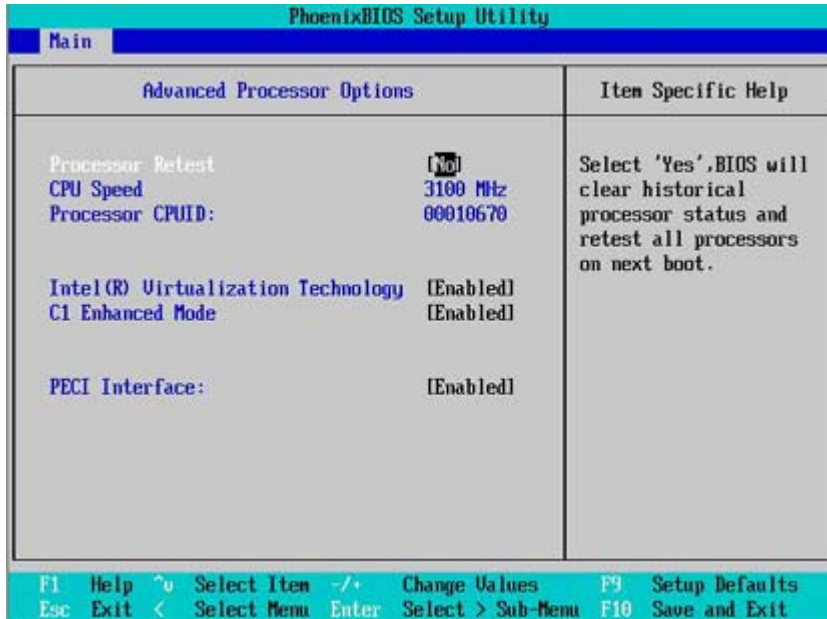

Figure 1-1: Advanced Processor Option

Advanced Processor Option

This category includes the information of CPU Speed, Processor ID. And setup menu for Intel Virtualizational Technology, C1 Enhanced Mode, and PECI Interface.

Processor Reset

- ▶▶ Yes Select 'Yes' BIOS will clear historical processor status and reset all processors on next boot.
- ▶▶ No Disables Processor Reset function. (Default setting)

☞ **Intel (R) Virtualization Technology**

Intel(R) Virtualization Technology will allow a platform to run multiple operating systems and applications in independent partitions. With virtualization, one computer system can function as multiple "virtual" systems. With processor and I/O enhancements to Intel's various platforms, Intel Virtualization Technology can improve the performance and robustness of today's software-only virtual machine solutions.

- ▶▶ Enabled Enabled Intel Virtualization Technology. (Default setting)
- ▶▶ Disabled Disables this function.

☞ **C1 Enhanced Mode**

With enabling C1 Enhanced Mode, all logical processors in the physical processor have entered the C1 state, the processor will reduce the core clock frequency to system bus ratio and VID.

- ▶▶ Enabled Enabled C1 Enhanced Mode.
- ▶▶ Disabled Disables C1 Enhanced Mode. (Default setting)

☞ **PECI Interface**

The Platform Environmental Control Interface (PECI Interface) is designed specifically to convey system management information from the processor. It is a proprietary single wire bus between the processor and the chipset or other health monitoring device. Data from the Digital Thermal Sensors are processed and stored in a processor register (MSR) which is queried through the Platform Environment Control Interface (PECI).

- ▶▶ Enabled Enable PECI Interface. (Default setting)
- ▶▶ Disabled Disable this function.

Advanced

About This Section: Advanced

With this section, allowing user to configure your system for basic operation. User can change the processor options, chipset configuration, PCI configuration and chipset control.

☞ System Memory/Extended Memory/Memory Frequency/DIMM Group A1, A2, B1, B2, C1, C2, D1, D2 Status

This category is display-only which is determined by POST (Power On Self Test) of the BIOS.

☞ Memory Reset

- ▶▶ Yes Select 'Yes', system will clear the memory error status. Save the changes and restart system. After rebooting system, the Memory Reset item will set to 'No' automatically.
- ▶▶ No Disable this function. (Default setting)

☞Extend RAM Step

- ▶▶ Enabled Enable test extended memroy process.
- ▶▶ Disabled Disable this function. (Default setting)

☞Memory Branch Mode

- ▶▶ Sequential Memory will use sequential mode to save date.
- ▶▶ Interleave Memory will use Interleave mode for to distribute every one memory to save date. (Default setting)
- ▶▶ Mirror Mirror will use backup date by image. Only half of the total memory is report to OS.
- ▶▶ Single Channel 0 Disable Default operate Dual channel Mode. Only Single channel 0 will be detect.

Serial Port A

This allows users to configure serial port A by using this option.

- ▶▶ Enabled Enable the configuration (Default setting)
 - ▶▶ Disabled Disable the configuration.
- ▶ Base I/O Address
 - ▶▶ 3F8/IRQ4 Set IO address to 3F8/IRQ4. (Default setting)
 - ▶▶ 2F8/IRQ3 Set IO address to 2F8/IRQ3.
 - ▶▶ 3E8/IRQ4 Set IO address to 3E8/IRQ4.
 - ▶▶ 2E8/IRQ3 Set IO address to 2E8/IRQ3.

Serial Port B

This allows users to configure serial port B by using this option.

- ▶▶ Enabled Enable the configuration
- ▶▶ Disabled Disable the configuration. (Default setting)

- ▶ Base I/O Address/IRQ

- ▶▶ 3F8/IRQ4 Set IO address to 3F8/IRQ4.
- ▶▶ 2F8/IRQ3 Set IO address to 2F8/IRQ3. (Default setting)
- ▶▶ 3E8/IRQ4 Set IO address to 3E8/IRQ4.
- ▶▶ 2E8/IRQ3 Set IO address to 2E8/IRQ3.

Parallel Port

This allows users to configure parallel port by using this option.

- ▶▶ Enabled Enable the configuration.
- ▶▶ Disabled Disable the configuration. (Default setting)

- ▶ Mode

This option allows user to set Parallel Port transfer mode.

- ▶▶ Bi-directional Use this setting to support bi-directional transfers on the parallel port. (Default setting)
- ▶▶ EPP Using Parallel port as Enhanced Parallel Port.
- ▶▶ ECP Using Parallel port as Extended Capabilities Port.

- ▶ Base I/O Address

- ▶▶ 378 Set IO address to 378. (Default setting)
- ▶▶ 278 Set IO address to 278.

- ▶ Interrupt

- ▶▶ IRQ5 Set Interrupt as IRQ5.
- ▶▶ IRQ7 Set Interrupt as IRQ7. (Default setting)

☞ **PS/2 Mouse**

Set this option 'Enabled' to allow BIOS support for a PS/2 - type mouse.

- ▶▶ Enabled 'Enabled' forces the PS/2 mouse port to be enabled regardless if a mouse is present. (Default setting)
- ▶▶ Disabled 'Disabled' prevents any installed PS/2 mouse from functioning, but frees up IRQ12.

☞ **USB Controller**

This item allows users to enable or disable the USB device by setting item to the desired value.

- ▶▶ Enabled Enable USB controller. (Default setting)
- ▶▶ Disabled Disbale this function.

☞ **USB 2.0 Controller**

This item allows users to enable or disable the USB 2.0 device by setting item to the desired value.

- ▶▶ Enabled Enable USB 2.0 controller.(Default setting)
- ▶▶ Disabled Disbale this function.

☞ **Legacy USB Support**

This option allows user to function support for legacy USB.

- ▶▶ Enabled Enables support for legacy USB (Default setting)
- ▶▶ Disabled Disables support for legacy USB.

☞ **Route Port 80h cycles to**

Set route port 80h cycles to either PCI or LPC bus.

- ▶▶ PCI Set Route Port 80h I/O cycles to the PCI bus. (Default setting)
- ▶▶ LPC Set Route Port 80h I/O cycles to the LPC bus.

Parallel ATA

- ▶▶ Enabled Enable Parallel ATA. (Default setting)
- ▶▶ Disabled Disable the device.

Serial ATA

- ▶▶ Enabled Enables on-board serial ATA function. (Default setting)
- ▶▶ Disabled Disables on-board serial ATA function.

▶ Native Mode Operation

This option allows user to set the native mode for Serial ATA function.

- ▶▶ Auto Auto detected. (Default setting)
- ▶▶ Serial ATA Set Native mode to Serial ATA.

▶ SATA Controller Mode Option

- ▶▶ Compatible Mode SATA and PATA drives are auto-detected and placed in Legacy mode. (Default setting)
- ▶▶ Enhanced Mode SATA and PATA drives are auto-detected and placed in Native mode.

Note: Pre-Win2000 operating system do not work in Enhanced mode.

Advanced Chipset Control

☞ Enable Multimedia Timer

- ▶▶ Yes Enable Multimedia Timer support.
- ▶▶ No Disable this function. (Default setting)

☞ Crystal Beach Configure Enable

Enable Configuration/Memory mapped accesses to the Crystal Beach Configuration sapce located in Device 8, Fn0, and Fn1.

- ▶▶ Enabled Crystal Beach Configure function. (Default setting)
- ▶▶ Disabled Disable this function.

I/O Acceleration Technology

It addresses all segments of the server I/O bottleneck problem using TCP/IP and without requiring any modification of existing or future applications.

- ▶▶ Enabled Enable I/O Acceleration Technology. (Default value)
- ▶▶ Disabled Disable this function.

Wake On LAN / PME

This option allow user to determine the action of the system when a LAN/PME wake up event occurs.

- ▶▶ Enabled Enable Wake On LAN/PME. (Default setting)
- ▶▶ Disabled Disable this function.

Note: This item must enabled if you're running under Windows operating system.

Wake On Ring

This option allow user to determine the action of the system power is off and the modem is ringing.

- ▶▶ Enabled Enable Wake On Ring. (Default setting)
- ▶▶ Disabled Disable this function.

Note: This item must enabled if you're running under Windows operating system.

Wake On RTC Alarm

When "RTC Alarm Resume" item is set to enabled, system will wakeup from RTC. (This item will be functionalized under ACPI OS)

- ▶▶ Enabled Enable alarm function to POWER ON system. (Default setting)
- ▶▶ Disabled Disable this function.

Note: This item must enabled if you're running under Windows operating system.

Hardware Monitor

▶▶ Display the current CPU1/CPU2 temperature, and Motherboard temperature.

☞ Voltage Monitor: +3.3V, +5V, VCOREA, VCOREB, VBAT

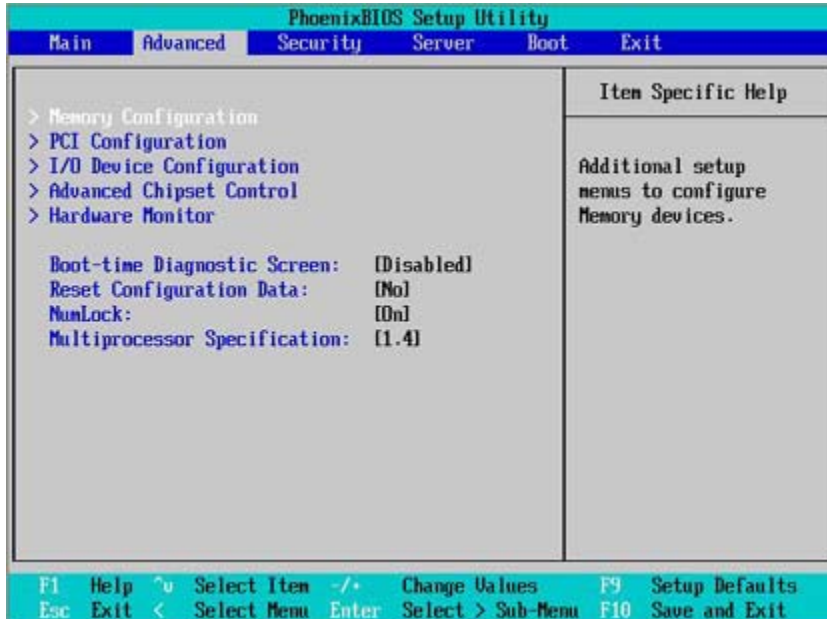

▶▶ Detect system's voltage status automatically.

☞ FAN Monitor: CPU Fan 1/2, Fan F2/R2, Fan F1/R1 (RPM)

▶▶ Display the current CPU and System FAN speed.

This Menu will disappear when BMC module is populated.

☞ Boot-time Diagnostic

When this item is enabled, system will shows Diagnostic status when system boot.

- ▶▶ Enabled Enable Boot-time Diagnostic.
- ▶▶ Disabled Disable this function. (Default setting)

☞ Reset Configuration Data

- ▶▶ Yes Reset all configuration data.
- ▶▶ No Do not make any changes. (Default setting)

☞ NumLock

This option allows user to select power-on state for NumLock.

- ▶▶ On Enable NumLock. (Default setting)
- ▶▶ Off Disable this function.

🔗 **Multiprocessor Specification**

This option allows user to configure the multiprocessor(MP) specification revision level.
Some operating system will require 1.1 for compatibility reasons.

- ▶▶ 1.4 Support MPS Version 1.4 . (Default setting)
- ▶▶ 1.1 Support M PS Version 1.1.

Security

🔗 About This Section: Security

In this section, user can set either supervisor or user passwords, or both for different level of password securities. In addition, user also can set the virus protection for boot sector.

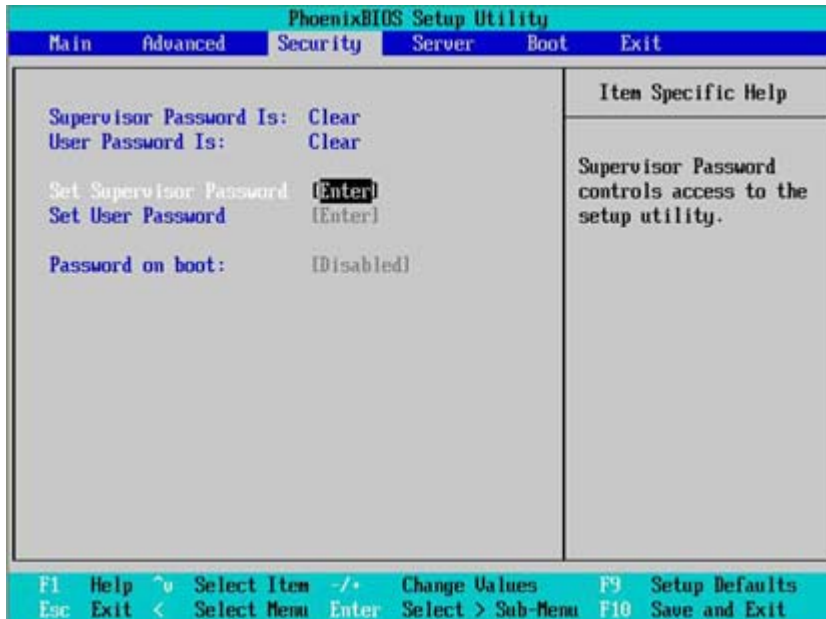

Figure 3: Security

🔗 Set Supervisor Password

You can install and change this options for the setup menus. Type the password up to 6 characters in length and press <Enter>. The password typed now will clear any previously entered password from the CMOS memory. You will be asked to confirm the entered password. Type the password again and press <Enter>. You may also press <Esc> to abort the selection and not enter a specified password or press <Enter> key to disable this option.

Set User Password

You can only enter but do not have the right to change the options of the setup menus. When you select this function, the following message will appear at the center of the screen to assist you in creating a password.

Type the password up to 6 characters in length and press <Enter>. The password typed now will clear any previously entered password from the CMOS memory. You will be asked to confirm the entered password. Type the password again and press <Enter>. You may also press <Esc> to abort the selection and not enter a specified password.

Password on boot

Password entering will be required when system on boot.

- ▶▶ Enabled Requires entering password when system on boot.
- ▶▶ Disabled Disable this function. (Default setting)

Boot

About This Section: Boot

The "Boot" menu allows user to select among four possible types of boot devices listed using the up and down arrow keys. By applying <+> and <Space> key, you can promote devices and by using the <-> key, you can demote devices. Promotion or demotion of devices alerts the priority that the system uses to search for boot device on system power on.

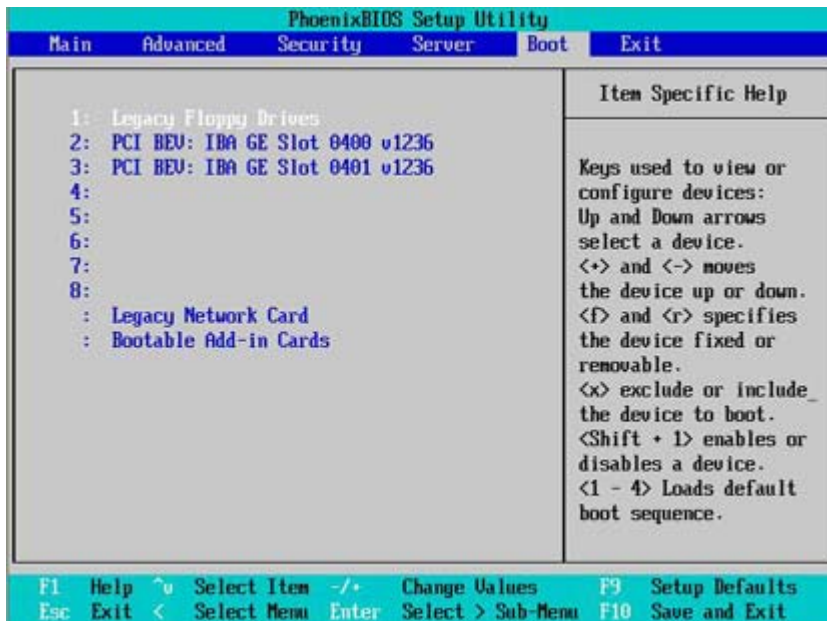

Figure 5: Boot

Boot Priority Order

This field determines which type of device the system attempt to boot from after **PhoenixBIOS Post** completed. Specifies the boot sequence from the available devices. If the first device is not a bootable device, the system will seek for next available device.

Key used to view ot configure devices:

Up and Down arrows select a device.

<+> and <-> moves the device up or down.

<f> and <r> specifies the device fixed or removable.

<x> exclude or include the device to boot.

<1-4> Loads default boot sequence.

Exit

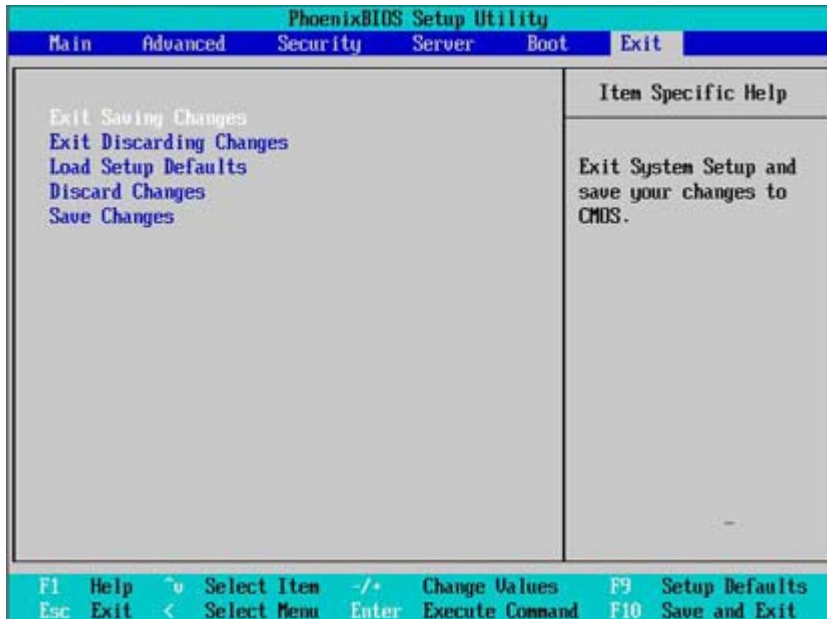

Figure 6: Exit

⚡ About This Section: Exit

Once you have changed all of the set values in the BIOS setup, you should save your changes and exit BIOS setup program. Select "Exit" from the menu bar, to display the following sub-menu.

- ☛ Exit Saving Changes
- ☛ Exit Discarding Changes
- ☛ Load Setup Default
- ☛ Discard Change
- ☛ Save Changes

☞ Exit Saving Changes

This option allows user to exit system setup with saving the changes.

Press <Enter> on this item to ask for the following confirmation message:

Pressing 'Y' to store all the present setting values tha user made in this time into CMOS.

Therefore, whenyou boot up your computer next time, the BIOS will re-configure your system according data in CMOS.

☞ Exit Discarding Changes

This option allows user to exit system setup without changing any previous settings values in CMOS. The previous selection remain in effect.

This will exit the Setup Utility and restart your computer when selecting this option.

☞ Load Setup Default

This option allows user to load default values for all setup items.

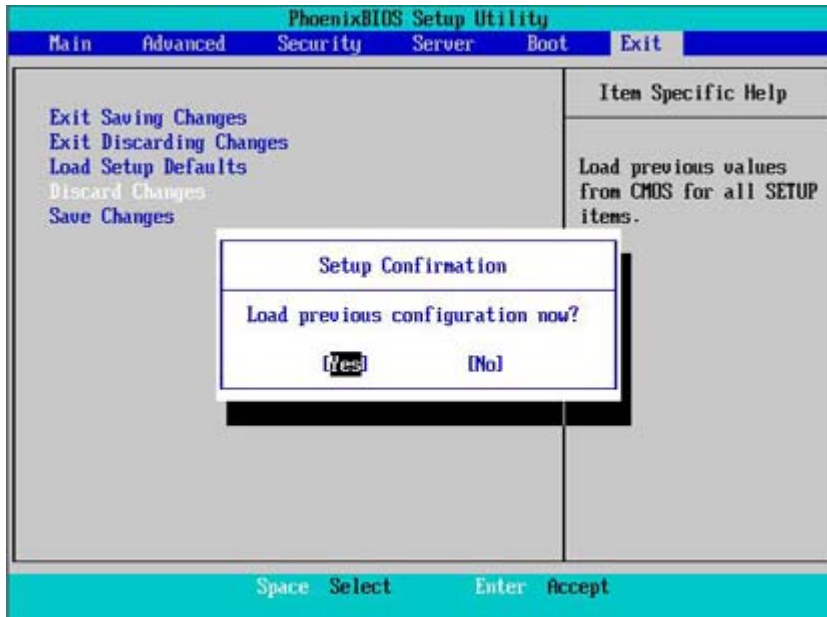

When you press <Enter> on this item, you will get a confirmation dialog box with a message as below:

☞ Discard Changes

This option allows user to load previous values from CMOS for all setup item.

When you press <Enter> on this item, you will get a confirmation dialog box with a message as below:

Save Changes

This option allows user to save setup data to CMOS.

When you press <Enter> on this item, you will get a confirmation dialog box with a message as below:

Press [Yes] to save setup data to CMOS.
