1.INTRODUCTION

1.1. PREFACE

AV Series delivers enhanced 3D and 2D graphics performance for today's demanding applications. Powered by the ATI RADEON™ 7000E graphics processor and 32 MB DDR memory; Maya AV Series features HYPER Z™ technology to increase effective memory bandwidth and PIXEL TAPESTRY™ for fast image rendering. Maya AV Series has industry leading, built-in DVD playback capability.

1.2. KEY FEATURES

- **Powered by the RADEON™ 7000E graphics processor**
- **ATI HYPER Z™ technology reduces memory bandwidth consumption resulting in improved 3D performance**
- **Incredible 3D graphics performance with ATI PIXEL TAPESTRY™ 3D rendering engine**
- **32MB DDR**
- **Silver HeatSink Onboard**
- **Supports DirectX® 7.0, DirectX® 8.x and OpenGL®**
- **DVD playback with integrated motion compensation and iDCT**
- **Supports 3D resolutions (32-bit color) up to 2048x1536**
- **AGP universal bus (for AGP 2X/4X systems)**
- **Support TV-OUT (S and AV connector) Function**
- **Support V-Tuner**

2.HARDWARE INSTALLATION

WARNING!

Expansion cards contain very delicate Integrated Circuit (IC) chips. To protect them against damage from static electricity, you should follow some precautions whenever you work on your computer.

1. Turn off your computer and unplug power supply.
2. Use a grounded wrist strap before handling computer components. If you do not have one, touch both of your hands to a safely grounded object or to a metal object, such as the power supply case.
3. Place components on a grounded antistatic pad or on the bag that came with the components whenever the components are separated from the system.

2.1. UNPACKING

The AV32DG package contains the following:

- The AV32DG graphics accelerator
- This USER'S MANUAL
- DVD Player software included
- Full version Game (CD x 1)
- Lite version Games x2 (CD x 1)
- CD for driver & Utilities

The card contains sensitive electric components, which can be easily damaged by static electricity, so the card should be left in its original packing until it is installed.

Unpacking and installation should be done on a grounded anti-static mat. The operator should be wearing an anti-static wristband, grounded at the same point as the anti-static mat.

Inspect the card carton for obvious damage. Shipping and handling may cause damage to your card. Be sure there are no shipping and handling damages on the card before proceeding.

●***DO NOT APPLY POWER TO YOUR SYSTEM IF IT HAS BEEN DAMAGED ON THE CARD.**

●***In order to ensure your graphics card working correctly, please use official Gigabyte BIOS only Use none official gigabyte BIOS might cause problem on the graphics card.**

2.2. BOARD LAYOUT

AV32DG (32MB DDRAM)

2.3. HARDWARE INSTALLATION

Installing Your Graphics card..

Now that you have prepared your computer, you are ready to install your graphics accelerator card.

To install your graphics accelerator card

1. Power off the computer and monitor , then disconnect the display cable from the back of your computer.

2. Remove the computer cover. If necessary, consult your computer's manual for help in removing the cover.

3. Remove any existing graphics card from your computer.

Or, if your computer has any on-board graphics capability, you may need to disable it on the motherboard. For more information, see your computer documentation.

4. Locate the AGP slot. If necessary, remove the metal cover from this slot; then align your Graphics card with the AGP slot, and press it in firmly until the card is fully seated.

5. Replace the screw to fasten the card in place, and replace the computer cover.

6. Plug the display cable into your card; then turn on the computer and monitor.

You are now ready to proceed with the installation of the Graphics card driver. For detailed instructions, select your operating system from the list below:

3. SOFTWARE INSTALLATION

In this manual, we assume that your CD-ROM Drive letter to be Drive D:

3.1. WINDOWS®98 /98SE or WINDOWS ME /WINDOWS XP DRIVER AND UTILITIES INSTALLATION

The installation of Win 98/98SE / Win ME / Win XP drivers is very simple.

When you insert the driver CD into your CD-ROM drive, you can see the AUTORUN window (if it does not show up, run "D:\setup.exe"). Then you can follow guides to setup your **AV32DG** driver (Please follow the subsection 3.1.3 "Step By Step Installation" to install the driver for your AV32DG graphics accelerator.

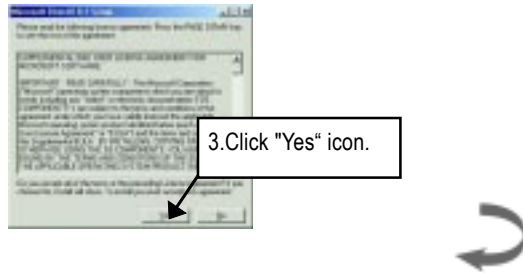

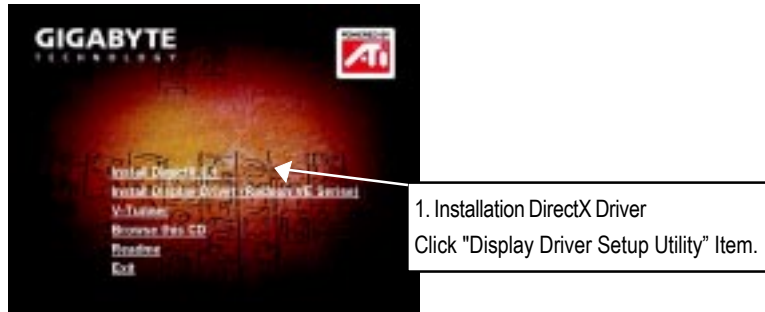

3.1.1. Operating system requirement

- If your OS is Microsoft Windows, when loading the **AV32DG** drivers for the system, please make sure your system (Windows 98/98SE or Windows ME)has installed DirectX8.1 or later.
- If you install the **AV32DG** drivers for the mainboard, which consist of SIS, ALI or VIA chipsets, please install the appropriate Driver program for that mainboard. Or please contact your motherboard nearest dealer for M/B Diver.

3.1.2.DirectX Installation

Install Microsoft DirectX 8.1 to enable 3D hardware acceleration support for Win98/98SE or WinME to achieve better 3D performance.

Note: For software MPEG support in Win98/98SE or WinME, you must DirectX first install.

4. Click "OK" item.

3.1.3.Driver Installation

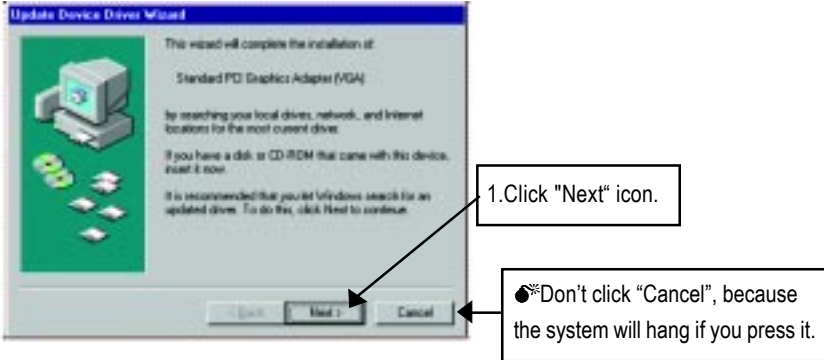

The following is the step-by-step installation guide.

Step 1: New Hardware Found

After **AV32DG** is inserted into your computer at the first time, the windows will automatically detect a new hardware in the system and pop out a "New Hardware Found" message.

Please select "Do not install a driver" and press OK.

Step 2: Update Device Driver Wizard: Standard PCI Graphics Adapter(VGA)

1.Click "Next" icon.

Don't click "Cancel", because the system will hang if you press it.

Step 3: Update Device Driver Wizard: Finish

At this time, system will ask for your Windows CD in order to complete the VGA driver installation.

If you don't have the CD, you can press C:\Windows\System directory.

Step 4: System Setting Change

2..Click "Finish" icon.

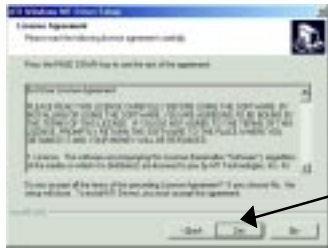

After the system has finished loading, insert the AV32DG driver CD disk into your CD-ROM, and then you can see the AUTORUN window. If it does not show up, please run "D:\setup.exe".

Step 5: Driver Setup

2..Click "Next" icon.

3.Click "Yes" icon.

4.Click "Finish" icon to restart computer.

V-Tuner (Overclock Utility)

V-Tuner lets you adjust the working frequency of the graphic engine and video memory (Core Clock and Memory Clock)

VGA Info

VGA Info lists the relevant information about your card.

Color Adjust

Color Adjust allows you to make color adjustments, such as brightness, contrast, and gamma values for each or all of RGB colors.

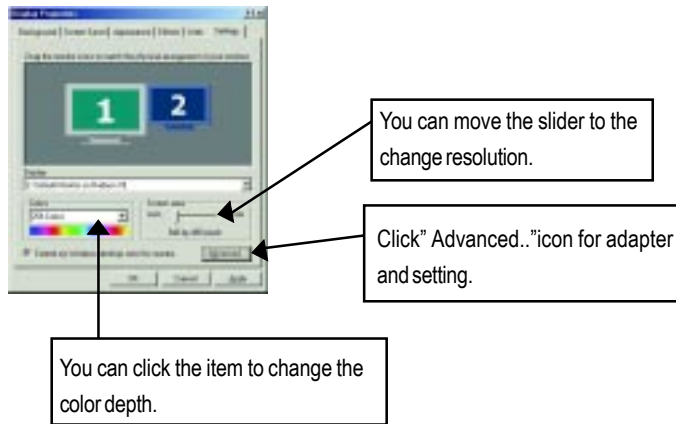

3.1.6. Display Property pages

The screen shows the information of display adapter, color, the range of display area . and the refresh rate.

Setting (Resolutions and Color depth for windows)

The Setting properties page allows you to adjust the Direct 3D settings

Options Properties

- **Enable ATI taskbar icon application** enables or disables the ATI taskbar icon. However, this feature must be enabled for ATI hotkey support.
- **Show ATI icon on taskbar** adds or removes the ATI icon from the taskbar.

OpenGL Properties:

The OpenGL properties page gives you complete control of the OpenGL settings.

■ Optimization Preference

- **Quality** allows you to optimize your OpenGL settings for quality.
- **Performance** allows you to optimize your OpenGL settings for performance

■ OpenGL Settings

- **Convert 32 bit textures to 16 bit** allows you to increase video performance for games that make heavy use of textures. However this could also reduce image quality.
- **Enable KTX buffer region extension** enables rapid updates of those portions of your screen that have been moved.
- **Enable page flipping** allows you to enable hardware acceleration of page flipping to swap full screen buffers.
- **Force 16-bit Z-buffering** allows you to disable all other formats of Z-buffer and utilizes 16-bit Z-buffering.
- **Disable dithering when alpha blending** may remove artifacts left on the screen when both dithering and alpha blending are enabled.
- **Wait for vertical sync** lowers the frames per second rate in full screen games. However this can reduce the image tearing that can occur with higher frame rates.
- **Enable texture compression** enables and disables texture compression.
- **Full Screen anti-aliasing** allows you to set the level of full-screen anti-aliasing. This will result in an overall higher quality image with a slight reduction in performance.

- **Anisotropic texture filtering** allows you to set a level of anisotropic texture filtering. This will result in much higher quality textures with a negligible reduction in performance.
- **Level of Detail** allows you to set the level of mipmapped detail. The **Sharp** setting is recommended for larger, more detailed, mipmapping scenes. The **Fuzzy** setting is recommended for smaller, less detailed, mipmapping scenes.

Direct 3D Display Properties

The Direct 3D properties page allows you to adjust the Direct 3D settings.

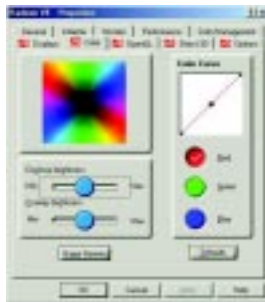

D3D Settings

- **Wait for vertical sync** allows you to lower the frame rate of full screen games. This will reduce image tearing that can occur with higher frame rates.
- **W-buffer support** allows you to enable or disable W-buffer support. It is recommended that W-buffer support should be disabled for games that do not support this feature.
- **Compressed texture format** allows you to enable support for DirectX compressed texture formats. Some applications cannot handle too many texture formats. Disabling compressed texture format the video driver ceases to support this feature.
- **Alternate pixel center** may eliminate problems with some 3D games that displays vertical and horizontal lines around textures or text that appears incorrect. However, this setting should only be used if you are experiencing these symptoms, as it may cause problems with other games.
- **Z-buffer bit depths** allows you to set the Z-buffer bit rate. By default 16:24 (16 and 24) is selected to achieve optimum performance.
8-bit Stencil allows you to add 32-bit Z-buffer with 8 bits for stencil and 24 bits for the Z-buffer.

- **Anti-aliasing** provides you with an overall higher quality video image with a slight reduction in performance. When “Application Preference” mode is selected, the video driver will use anti-aliasing only when an application requests it. When “Always On” mode is selected, the video driver will force anti-aliasing on all applications.
- **2 Samples** provides a higher sample ratio, which improves overall image quality even further, with a slight reduction in performance. This also requires more video memory.
4 Sample provides a higher sample ratio, which improves overall image quality even further, with a slight reduction in performance. This also requires more video memory.
- **Dithering method** when alpha blending will remove certain onscreen artifacts that are sometimes produced when both dithering and alpha blending are enabled.
- **Defaults** restores your Direct 3D setting to their default values.

Color Properties

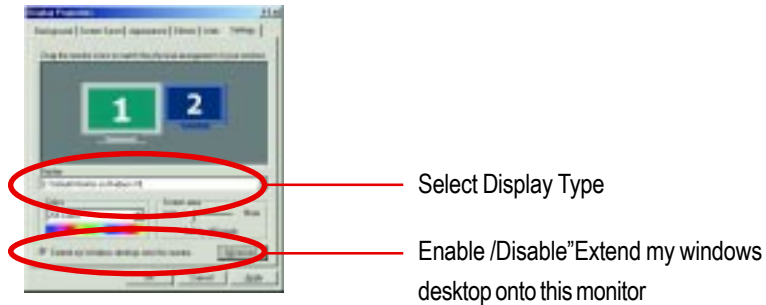

The **Color Properties** is used to adjust the color settings. It also allows gamma control for video playing of the Video Overlay. The color settings affect all display devices mapped to the view. You can change red, green, and blue display colors. Set Desktop and Video Overlay brightness (gamma) levels can also be changed.

- **Desktop brightness** increases or decreases the color brightness of your desktop. The higher the gamma value, the higher the brightness and contrast of your display.
- **Overlay brightness** increases or decreases the color brightness of your video overlay window. The higher the gamma value, the higher the brightness and contrast of your display.
- **Game gamma** increases or decreases the color brightness of Direct 3D or OpenGL games played in fullscreen mode.
- **Color Curve** adjusts the selected color (red, green, or blue) by moving the color curve with your mouse.
- **Default** restores the color settings to the default values.

Display Properties:

If you VGA card is equipped with a S-Video connector , you can use a second output device (e.g. a TV or a computer monitor) as part of your operating desktop extending your desktop to second device or copying your desktop on the second device.

Connecting your graphics card to a TV or VCR

Turn off your computer and your television (or VCR).
Ensure your graphics card is installed correctly.

For information about placing the card in your computer and installing the enhanced graphics driver, see the user's manual.

Determine if your television (or VCR) has an S-Video or Composite video connection.
Looking at the back of your computer, locate your graphics card. Using an S-Video cable or the supplied adapter cable, attach one end of the cable to your graphics card and the other to your television (or VCR). See "Connecting your graphics card to a TV (or VCR)" on the following page.

3.2. WINDOWS NT 4.0 DRIVER INSTALLATION

Please make sure the Windows NT4 have installed Windows NT 4.0 Service Pack version 6.0 (or later) before installing the graphics accelerator driver.

To install the AV32DG driver for Windows NT

1. Insert the INSTALLATION CD into your CD-ROM drive. If Windows® runs the CD automatically.
2. Click Start.
3. Select Run.
4. Type the following:
D:\SETUP
(If D is not your CD-ROM drive, substitute D with the correct drive letter.)
5. Click "OK".
6. Click on "Install Display Drivers(Radeon VE Series)" to begin the Installation Wizard.
7. Click "Next".
8. Click "Yes" to the license agreement.
9. Follow the Wizard's on-screen instructions to complete the installation.

3.3.WINDOWS 2000 DRIVER INSTALLATION

Please make sure the Windows NT 2000 have installed Windows® 2000 Service Pack version 2 (or later) before installing the graphics accelerator driver.

With Windows® 2000 running on your computer, you need to install the AV32DG driver to take advantage of the higher performance, resolutions, and special graphic features of the Graphics card. To ensure you install the latest driver, use the Installation CD that shipped with your Graphics card.

To install the AV32DG driver for Windows® 2000

1. Insert the INSTALLATION CD into your CD-ROM drive. If Windows® runs the CD automatically.
2. Click Start.
3. Select Run.
4. Type the following:
D:\SETUP
(If D is not your CD-ROM drive, substitute D with the correct drive letter.)
5. Click "OK".
6. Click on "Install Display Drivers(Radeon VE Series)" to begin the Installation Wizard.
7. Click "Next".
8. Click "Yes" to the license agreement.
9. Follow the Wizard's on-screen instructions to complete the installation.

3.4.BIOS FLASH UTILITY

AV32DG BIOS update procedure:

- Note: Please download the newest BIOS from our website (www.gigabyte.com.tw) or contact your local dealer for the file.
- If you want to realize the BIOS flash information, please refer to detail on P.26

4. Troubleshooting Tips

The following troubleshooting tips may help if you experience problems. Contact your dealer or GBT for more advanced troubleshooting information.

- Check that the card is seated properly in the AGP slot.
- Ensure the display cable is securely fastened to the card's display connector.
- Make sure that the monitor and computer are plugged in and receiving power.
- If necessary, disable any built-in graphics capabilities on your motherboard. For more information, consult your computer's manual or manufacturer. (NOTE: Some manufacturers do not allow the built-in graphics to be disabled or to become the secondary display.)
- Make sure you selected the appropriate display device and graphics card when you installed the graphics driver.
- For more troubleshooting tips, right-click the ATI icon in the taskbar and select Troubleshooting.
- If you have problems during bootup, start your computer in Safe Mode. In Windows®98 SE and Windows® Me, press and hold the CTRL key until the Microsoft® Windows® Startup Menu appears on the screen. Then select the number for Safe Mode, and press Enter. (You can also use F8 to bring up the Microsoft Windows® Startup Menu.) In Safe Mode, bring up the Device Manager and check for duplicate display adapter and monitor entries if you are only using one graphics card.
- For more assistance, use the Troubleshooting Guide located in the Windows® Help or contact your computer manufacturer.

5. Appendix

5.1. How to reflash the BIOS

How to reflash the BIOS for your (Chip by ATi) graphics card?

1. Extract the Zip file to the drive C: or A:

2. Restart your PC in MS-DOS mode
(This function only for Windows 98/98SE, If your OS is Windows 2000 / Windows Me / Windows XP. please use the bootable disk to MS-DOS mode)

3. Change the command path to the file location C:\> or A:\>

4. Reflash BIOS command as below : C:\> atiflash -p 0 <filename>

5. Reboot your PC when it's done.

5.2.Resolutions and Color Depth Table

RADEON 7000E (VE) 2D Display Modes
