2. Hardware Installation

2.1. Board Layout

Expansion cards contain very delicate Integrated Circuit (IC) chips. To protect them against damage from static electricity, you should follow some precautions whenever you work on your computer.

1. Turn off your computer and unplug power supply.
2. Use a grounded wrist strap before handling computer components. If you do not have one, touch both of your hands to a safely grounded object or to a metal object, such as the power supply case.
3. Place components on a grounded antistatic pad or on the bag that came with the components whenever the components are separated from the system.

The card contains sensitive electric components, which can be easily damaged by static electricity, so the card should be left in its original packing until it is installed.

Unpacking and installation should be done on a grounded anti-static mat. The operator should be wearing an anti-static wristband, grounded at the same point as the anti-static mat.

Inspect the card carton for obvious damage. Shipping and handling may cause damage to your card. Be sure there are no shipping and handling damages on the card before proceeding.

⚡ **DO NOT APPLY POWER TO YOUR SYSTEM IF IT HAS BEEN DAMAGED ON THE CARD.**

⚡ **In order to ensure your graphics card working correctly, please use official Gigabyte BIOS only. Use none official Gigabyte BIOS might cause problem on the graphics card.**

2.2. Hardware Installation

Installing Your graphics card.

Now that you have prepared your computer, you are ready to install your graphics accelerator card.

To remove the existing graphics card:

1. Power off the computer and monitor, then disconnect the display cable from the back of your computer.

2. Remove the computer cover. If necessary, consult your computer's manual for help in removing the cover.

3. Remove any existing graphics card from your computer.

Or, if your computer has any on-board graphics capability, you may need to disable it on the motherboard. For more information, please see your computer documentation.

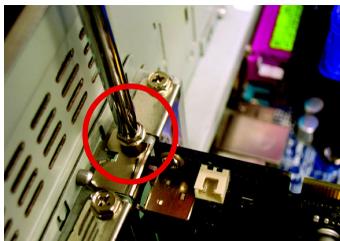

To install your new graphics card:

1. Locate one PCI Express x16 slot. If necessary, remove the metal cover from the slot; then align your graphics card with the PCI Express x16 slot, and press it in firmly until the card is fully seated.
 - * Please make sure that the gold edge connectors of the graphics card is securely inserted.

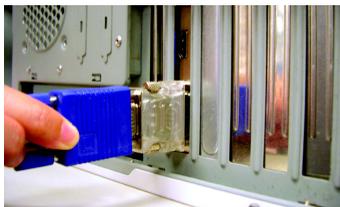

2. Replace the screws to fasten the card in place, and replace the computer cover.

3. The GV-NX76T256HI-RH provides one DVI-I connector and one HDMI connector. Plug the display cable into your graphics card; then turn on the computer and monitor. To connect a flat panel directly to your graphics card, use the DVI-I connector. To connect a VGA monitor to the DVI-I connector, plug the DVI-I to D-sub adapter into the DVI-I connector, then plug the monitor cable into the adapter.

Connect a flat panel

Connect a VGA monitor via DVI-I to D-sub adapter

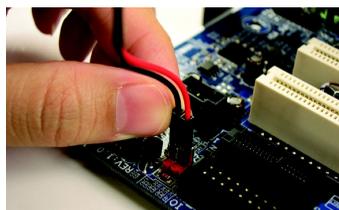

- To connect an HDMI TV, use either Method A or Method B below (depending on your motherboard design) to enable the S/PDIF in function for the graphics card. It is recommended Method A be used on motherboards that have a free S/PDIF header.

Method A (via the S/PDIF out header):

Connect the provided S/PDIF cable to the graphics card and the S/PDIF out header on your motherboard (the red wire connects to the S/PDIF out pin and the black to the Ground pin).

A-1. Connect the SPDIF cable to the graphics card

A-2. Connect the SPDIF cable to the motherboard.

Method B (via the coaxial S/PDIF out jack):

Connect the GIGABYTE video adapter to the TV-Out port on the graphics card. Insert one end of the SPDIF coaxial cable (optional) into the S/PDIF in jack on the adapter and the other end into the coaxial S/PDIF out jack on your motherboard.

B-1. Connect the GIGABYTE video adapter to the TV-Out port on the graphics card

B-2. Connect the SPDIF coaxial cable (optional) to the video adapter and motherboard

- Then connect an HDMI TV or a flat panel (by using the HDMI-to-DVI-I adapter) to the card.

HDMI signals that have been converted to DVI digital signals by adapter cannot be converted to analog RGB signals.

GIGABYTE Thermal Solution Guidelines:

1. GIGABYTE established the use of silent pipes on graphics card's thermal solution, and has been the leading company for silent thermal solution. GIGABYTE's passive thermal solution allows system to work perfectly in chassis with 40~50 degrees Celsius through the air flow of the system. Please beware of the other excess component or insufficient system thermal design that may cause high system temperature. Excess high temperature will affect the passive thermal design and thus compromising system stability.
2. GIGABYTE TECHNOLOGY's passive thermal design effectively implemented heat exchange, radiation and convection to improve stability of the system. Please maintain passive thermal sink at a normal and clean environment. Extra dust on heatsink may decrease the effectiveness of the thermal design.

(2) Connecting S-Video

If your TV has a S-Video connection, connect the S-Video cable from your TV to the S-Video Out port on the adapter.

(3) Connecting AV Output

If your TV has Composite video connection, you can connect the RCA cable from your TV to the AV Out port on the adapter.

(4) Connecting S/PDIF IN (for HDMI TV)

If you wish to connect an HDMI TV, you may insert one end of the S/PDIF coaxial cable (optional) into the S/PDIF in jack on the adapter and the other end into the coaxial S/PDIF jack on your motherboard.

How NVIDIA® SLI™ (Scalable Link Interface) technology works:

In an SLI configuration, two SLI-ready graphics cards of the same model and the same manufacturers are connected together via SLI bridge connector in a system that provides two x16 PCI Express slots to scale graphics performance. The picture below shows that two graphics cards are linked in parallel in an SLI configuration.
