1. Introduction

1.1. Features

- Powered by NVIDIA[®] GeForce[™] 6200 Graphics Processing Unit (GPU)
- Supports the newest PCI Express x 16
- Integrated with 128MB DDR memory
- Supports DirectX 9.0c
- Supports AV / S-Video and HDTV output
- Supports D-Sub and DVI-I connector

1.2. Minimum system requirement

- IBM[®] or 100% PC compatible with Pentium[®] III 650MHz or AMD Athlon 650MHz class processor or higher
- One PCI Express x 16 slot
- Operating Systems Win[®] 2000 / Win[®] XP
- 64MB system memory
- 50MB of available disk space for full installation
- CD-ROM or DVD-ROM drive
- A PCI Express compliant motherboard and power supply.

2. Hardware Installation 2.1. Board Layout TV-ou **DVI-I** Connector VGA Monitor Connector (15-pin) DVI Output Digital LCD Monitor Pr HDTV Pb/AV Output Y NTSC / PAL TV TV-out S-Video Output D Projector DVI-I to D-Sub Connector **DVI-I** Connector m * -D ø VGA Output Ô IЬ VGA Monitor $\mathbf{\mathbf{x}}$ vvv Connector Analog LCD Monitor (15-pin) OR VGA Output Analog Monitor Analog LCD Monitor

Expansion cards contain very delicate Integrated Circuit (IC) chips. To protect them against damage from static electricity, you should follow some precautions whenever you work on your computer.

- 1. Turn off your computer and unplug power supply.
- 2. Use a grounded wrist strap before handling computer components. If you do not have one, touch both of your hands to a safely grounded object or to a metal object, such as the power supply case.
- 3. Place components on a grounded antistatic pad or on the bag that came with the components whenever the components are separated from the system.

The card contains sensitive electric components, which can be easily damaged by static electricity, so the card should be left in its original packing until it is installed. Unpacking and installation should be done on a grounded anti-static mat. The operator should be wearing an anti-static wristband, grounded at the same point as the anti-

static mat.

Inspect the card carton for obvious damage. Shipping and handling may cause damage to your card. Be sure there are no shipping and handling damages on the card before proceeding.

Set DO NOT APPLY POWER TO YOUR SYSTEM IF IT HAS BEEN DAMAGED ON THE CARD.

2.2. Hardware installation

Installing Your graphics card.

Now that you have prepared your computer, you are ready to install your graphics accelerator card.

To install your graphics accelerator card:

1. Power off the computer and monitor, then disconnect the display cable from the back of your computer.

3. Remove any existing graphics card from your computer.

Or, if your computer has any on-board graphics capability, you may need to disable it on the motherboard. For more information, please see you computer documentation.

4. Locate the PCI Express x 16 slot. If necessary, remove the metal cover from this slot; then align your graphics card with the PCI Express x 16 slot, and press it in firmly until the card is fully seated.

5. Replace the screw to fasten the card in place, and replace the computer cover.

 Plug the display cable into your card; then turn on the computer and monitor. If your graphics card came with a DVI-I connector, you can connect a flat panel display to the appropriate connector, as shown below...

3. Software Installation

In this manual, we assume that your CD-ROM Drive letter to be Drive D:

The installation of Win[®] 2000 / Win[®] XP drivers is very simple. When you insert the driver CD into your CD-ROM drive, you can see the AUTORUN window (if it does not show up, run "D:\setup.exe"). Then you can follow the guides to setup your graphics card driver. (Please follow the subsection 3.1.3 "Driver installation" to install the driver for your graphics accelerator.)

3.1. Win[®] XP driver and utilities installation

3.1.1. Operating system requirement

- When loading the graphics card drivers for the system, please make sure your system has installed DirectX 9 or later version.
- If you install the graphics card drivers for the motherboard, which consist of SIS or VIA chipsets, please install the appropriate driver program for that motherboard. Or please contact your motherboard nearest dealer for motherboard driver.

3.1.2. DirectX installation

Install Microsoft DirectX to enable 3D hardware acceleration support for Windows[®] 2000 or Windows[®] XP to achieve better 3D performance.

◆[™] Note: For software MPEG support in Windows[®] 2000 or Windows[®] XP, you must install DirectX first.

Step 2. Choose I accept the agreement and Click "Next" button.

Step 3. Click "Next" button.

Installing the components.

Step 4. Click "Finish" to restart computer. Then the DirectX 9 installation is completed.

3.1.3. Driver installation

A. New hardware found

After the graphics card is inserted into your computer at the first time, the windows will automatically detect a new hardware in the system and pop out a "New Hardware Found" message. The following is the step-by-step installation guide.

Step 1: Found new hardware wizard: Video controller (VGA Compatible)

Step 2: Found new hardware wizard: Searching and installing

The wizard will search for the driver and install it automatically.

Found New Hardware Wizard
Please wait while the wizard searches
Video Controller (VGA Compatible)
S
Cancel

Step 3: Found new hardware wizard: Finish

Click the "Finish" button to finish the installation.

B. Driver installation (Autorun Window)

Insert the driver CD disk into your CD-ROM, and then you can see the AUTORUN window. If it does not show up, please run "D:\setup.exe".

Step 2. Click "Next" button.

Windows installings the components.

Step 3. Click "Finish" button to restart computer. Then the driver installation is completed.

3.1.4. Utilities on driver CD

Insert the driver CD disk into your CD-ROM, and then you can see the AUTORUN window. If it does not show up, please run "D:\setup.exe".

• Install V-Tuner 2:

Step 1.Click "Utilities" item. -

Step 3. Click "Next" button.

Step 2.Click "GIGABYTE Utility" item. ----

User Information	
	Please entiry jour name and the name of the company for whom you work.
3	<box [imi]="" canol<="" td=""></box>

Step 4. Enter your name and company.

Step 5. Click "Finish" button to restart computer. Then the V-Tuner2 installation is completed. English

V-Tuner 2

V-Tuner 2 lets you adjust the working frequency of the graphic engine and video memory (Core Clock and Memory Clock).

3.1.5. Taskbar icon

After installation of the display drivers, you will find a GIGABYTE icon **G** on the taskbar's status area. Right-clicking this icon opens the GIGABYTE control panel, showing a menu composed of shortcut of the graphics card's enhanced and other functions.

You may click the "Display Properties" item, and then click Settings. Click "Advanced" after clicking Settings. Click the appropriate tab to change your display settings.

You can link to GIGABYTE website for updated information about the graphics accelerator, latest drivers, and other information.

Right click the icon.

VGA Information

VGA Info lists the relevant information about your card.

Color Adjust

Color Adjust allows you to make color adjustments, such as brightness, contrast and gamma values for each or all of RGB colors.

Default Format
😹 VGA Info 📃 Color Adjust
Adjust Display Color Setting Bightness: ····································
OK Cancel

After installation of the display drivers, you will find a NVIDIA icon **a** on the taskbar's status area. Click this icon to open the control panel.

Right click the icon.

-You can adjust the properties of the graphics accelerator from here.

3.1.6. Display Properties pages

To access Display Properties pages, right-click the GBT icon on the taskbar and select **Display Properties** or right-click on Desktop and then select **Properties**. The **Display Properties** dialog box shows the information of display adapter, color, the range of display area, and the refresh rate.

Settings (Resolutions and Color depth for Windows)

You may adjust the screen resolution and color quality settings in this dialog box.

To access more advanced options, click the "Advanced" button.

GeForce 6200 properties

After pressing the "Advanced" button in **Settings**, you'll see the **Default Monitor and NVIDIA GeForce 6200 Properties** dialog box. Click the **GeForce 6200** tab. (You can also click the Nvidia icon on the taskbar and select **Nvidia Display** to access the Geforce 6200 properties page.)

This page shows the Adapter, System and Driver version information.

You can select other properties from the pop-out menu.

nView Display Mode properties

Color Correction properties

- The sliders lets to decide whether your application should use quality or high performance texture.
 - Application profiles: Select the application profile from the list of profiles.
 - Global Driver Settings: Select the Settings item and move the slider below to set the degree of antialiasing to used in Direct3D and OpenGL applications.
 - Antialiasing settings: allows to set the degree of the Global Driver Settings.
- The Color Correction Properties is used to compensate for variations in luminance between a source image and its output on a display device. Adjust the color correction settings to provide more accurate color reproduction of images(such as photographs) on your display device. Also, many 3D-accelerated games may appear too dark to play. Increasing the brightness and/or the gamma value equally across all channels makes these games appear brighter and more playable.

Overlay Controls properties

The Overlay Controls Properties can adjust Overlay zoom controls and Overlay color controls. There is only one video overlay, which is only available on the **Primary** display. The video overlay controls are automatically activated during playback of any video file type that supports overlay adjustments. The "Adjust Colors" button will access "Color Correction" properties page.

Troubleshooting properties

- The NVIDIA settings taskbar utility lets you conveniently access various features and presets you've configured in the Display Properties directly from the Windows taskbar.
 - Display the NVIDIA Settings icon in the taskbar The Desktop Manager provides enhanced nView multidisplay functionality and helps you organize your applications for use with multiple displays and desktops.
 - My connected TV does not appear in this list This option can be used to force detection of an attached TV set which does not report its presence to the graphics card.

NV Rotate properties

- The NV Rotate Properties is used to rotate the screen. If your monitor is capable of operating in either Landscape or Portrait mode, you can adjust the screen by this properties.
 - Landscape (0 degree rotation)
 - Portrait (90 degree rotation)
 - Inverted Landscape (180 degree rotation)
 - · Inverted Portrait (270 degree rotation)

Refresh Rate Overrides properties

 Click "Override refresh rates" to select refresh rate overrides to be used in applications.

Screen Resolutions & Refresh Rates properties

The Screen Resolutions & Refresh Rates properties allows you to adjust the screen resolution, color quality and monitor settings (screen rdfresh rates). Or you can customize resolutions and refresh rates.

Menu Editing properties

The Menu Editing Properties can remove infrequently used screens by dragging them from the screen menu to the list below. Restore screens to the menu by dragging them individually, or click Restore Defaults.

To begin, check the **Enable screen menu editing** check box. To return to normal navigation mode, uncheck the check box.

3.1.7. nView properties pages

nView is a set of desktop tools designed to help you be more productive when using your graphics card. With nView you can set up multiple desktops to work with your applications. Multiple desktops give you extra desktop areas on which to run your applications so you won't have to crowd several open application windows on one desktop.

Enable the nView Desktop Manager features:

Right-click on desktop and choose Properties\Settings\Advanced\GeForce 6200\Desktop Management

Click Enable button to turn on all the nView Desktop Manager features.

Access nView properties page:

To access the **nView** properties page, you can click the NVIDIA icon **on** the taskbar and select **nView Properties** under **nView Destop Manager** (Method A). Or right-click on Desktop, select Properties/Settings/Advanced/ GeForce 6200. Double-click Desktop Management item on the pop-up menu (Method B).

Method A:

Method B:

Click the item to start nView Properties.

Double-click Desktop Management to see more nView properties.

3.2. Win[®] 2000 driver installation

With Windows running on your computer, you need to install the graphics card driver to take advantage of the higher performance, resolutions, and special graphics features of the graphics card. To ensure you install the latest driver, insert the Installation CD that shipped with your graphics card.

To install the graphics card driver for Win[®] 2000, please insert the Installation CD. Then the AUTORUN window will show up. Click **Install Display Driver** item, and follow the wizard to install the driver.

If Windows® does not show the CD automatically, please run following steps:

- 1. Click the Start button on the control bar.
- 2. Select Run.
- 3. Type the following: D:\SETUP.exe

(If D is not your CD-ROM drive, substitute D with the correct drive letter.)

- 4. Click "OK".
- 5. Click on "Install Display Drivers" to begin the Installation Wizard.
- 6. Click "Next".
- 7. Click "Yes" to the license agreement.
- 8. Follow the Wizard's on-screen instructions to complete the installation.

Please make sure the Windows[®] 2000 have installed Windows[®] 2000 Service Pack (or later) before installing the graphics accelerator driver.

The following troubleshooting tips may help if you experience problems. Contact your dealer or GBT for more advanced troubleshooting information.

- Check that the card is seated properly in the PCI Express x 16 slot.
- Ensure that the display cable is securely fastened to the card's display connector.
- Make sure that the monitor and computer are plugged in and receiving power.
- If necessary, disable any built-in graphics capabilities on your motherboard. For more information, consult your computer's manual or manufacturer. (NOTE: Some manufacturers do not allow the built-in graphics to be disabled or to become the secondary display.)
- Make sure you selected the appropriate display device and graphics card when you installed the graphics driver.
- Restart your computer. Press the F8 key on your keyboard after system starts up. When the Windows Advanced Options Menu appears, select Safe Mode and press Enter. After getting into Safe Mode, in Device Manager check whether the driver for the graphics card is correct.
- For more assistance, use the Troubleshooting Guide located in the Windows[®]
 Help or contact your computer manufacturer.

If necessary, adjust your monitor's setting by monitor's adjust panel to make the screen looks focused, crisp, and sharp. (Please refer to the monitor's manual.)

5. Appendix

5.1. How to Reflash the BIOS

5.1.1. Reflash BIOS in MS-DOS mode

- 1. Extract the downloaded Zip file to your hard disk(s) or floppy disk. This procedure assumes drive A.
- 2. Restart the computer in MS-DOS mode. (For Windows 2000/XP, you need a startup disk to restart the computer in MS-DOS mode.)
- 3. Change the command prompt to A:\>.
- 4. To back up the current BIOS, at the A:\> prompt, type [BIOS flash utility name] -s [BIOS file name] (example: gvf11 -s nx66t128d.f1) and press Enter.
- To flash BIOS, at the A:\> prompt, type [BIOS flash utility name] -p [BIOS file name] (example: gvf11 -p nx66t128d.f2) and press Enter.
- 6. Wait until it's done, then restart your computer.

5.1.2. Reflash BIOS in Windows mode

1. After installing the display drivers, you will find a GIGABYTE **G** icon in the lower-right corner of the Taskbar. Right-click to select the @VGA utility.

@VGA flash BIOS utility.

- 2. Update BIOS through the Internet
 - a. Select the Live Update check box and click Flash. Then @VGA will automatically download the BIOS for your card from GIGABYTE @VGA server and do the update for you.(@VGA will not download/update the BIOS if it detects the current BIOS on your card is the latest one.)
- 3. Update BIOS NOT through the Internet
 - Download the BIOS ZIP file for your card from GIGABYTE website and extract it to your hard disk (or floppy disk).
 - b. Select the From Local File check box and then click Flash.
 - c. Select the BIOS file from your hard disk (or floppy disk).
 - d. Complete the update procedure following the on-screen instructions.

5.2. Resolutions and Color Depth Table (In Windows[®] XP)
